Cholum—Sorghum Vulgare.
Kadale—(Benga gram) Ciser Arietinum.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7½	6 to 6½	seers per rupee.
Ragi ...	19	11 to 12	

Agricultural operations.—(1) Thrashing of paddy and (2) Ploughing of fields.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Standing crops* in Hoskote, Kankanhalli, Magadi, Anekal and Closepet are reported to be in good condition.

Crops harvested.—Ragi, avare, togari, horse-gram and Karthika paddy are being harvested in the Hoskote, Nelamangala, Magadi, Devanhalli, Closepet and Channapatna Taluks. Sugar-cane is being milled in the Devanhalli and Channapatna Taluks.

No damage of any kind to crops are reported from any of the taluks.

10. Prospects of the season generally good. Food stuffs generally sufficient. It is reported that the tanks in the Devanhalli and Channapatna Taluks have received from the recent rains a supply of water for two or three months.

11. Public health generally good. But plague is still prevalent in the towns of Devanhalli and Channapatna and also in some of the villages in the Hoskote, Dodballapur, Anekal and Devanhalli Taluks. In Closepet it has begun to subside.

12. Cattle healthy. Water and fodder available.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Crop sown.—Paddy in Kolar, Bowringpet, Chintamani, Sidlaghatta and Malur.

Crops harvested.—Paddy in Kolar, Bowringpet and Malur. Horse-gram in Kolar, Bowringpet, Mulbagal, Sidlaghatta, Malur and Srinivaspur. Avare in Kolar, Mulbagal, Sidlaghatta, Chikballapur, Malur and Gudibanda. Sugar-cane in Kolar, Bowringpet, Chintamani, Sidlaghatta, Chikballapur and Goribidnur. Togari in Malur and Gudibanda. Turmeric in Sidlaghatta and ground-nut in Chintamani.

10. Prospects of the season generally good. Food stuffs available.

11. Except for the prevalence of plague in the Kolar Gold Fields, Mulbagal, Chikballapur, Sidlaghatta and in a few villages of the Sidlaghatta and Goribidnur Taluks, small-pox in parts of Srinivaspur and cholera in the villages of Tayalur and Nangli in the Mulbagal Taluk, public health generally good.

12. Cattle generally healthy. But "Sappe roga" prevails in parts of the Gudibanda Sub-Taluk.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are in moderate condition.

Crops sown.—Paddy in Tumkur, Maddagiri, Chiknayakanhalli, Sira, Gubbi, Pavagada, Kunigal and Koratagere; Bengal-gram in Sira Tiptur and Koratagere and cholam in Sira and Tiptur.

Crops harvested.—Paddy in Tumkur, Chiknayakanhalli, Gubbi and Kunigal; castor in Tumkur, Tiptur, Pavagada, Kunigal and Koratagere; avare in Maddagiri, Chiknayakanhalli, Sira, Gubbi, Tiptur, Pavagada, Kunigal and Koratagere; togari in

Maddagiri, Sira, Gubbi, Tiptur, Kunigal and Koratagere; horse-gram in Maddagiri, Sira, Pavagada and Koratagere; til in Sira, Tiptur and Kunigal; sugar-cane in Gubbi and Turuvekere; ground-nut in Gubbi; haraka in Tiptur; and save and ragi in Koratagere.

10. Prospects of the season good. Food stuffs available.

11. Public health generally good. But plague prevails in the towns of Tumkur, Chiknayakanhalli and Gubbi; and fever in Tiptur.

12. Except in Chikdhalavatta village of the Maddagiri Taluk, Handankere in the Chiknayakanhalli Taluk, and Rajavanti and Hoskote in the Pavagada Taluk, cattle healthy. Fodder available. Water scarcity is being felt in the Nonavinkere and Kibbanahalli villages of the Tiptur Taluk.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Seringapatam, Gundlupet, T.-Narsipur and Mandya Taluks are being ploughed.

Standing crops are reported to be in good condition in all the taluks.

Crops harvested.—Paddy in parts of the Heggaddevankote, Nanjangud, Malvalli and Nagamangala Taluks; ragi in parts of the Mandya and Nagamangala Taluks; horse gram in parts of the Heggaddevankote, T.-Narsipur, Malvalli and Nagamangala Taluks; haraka in parts of the Nagamangala Taluk; sugar-cane in parts of the T.-Narsipur Taluk; coriander and menthya in parts of the Yedatore Taluk; Bengal gram and avare in parts of the Yedatore, T.-Narsipur and Mandya Taluks; gingelly in parts of the Hunsur and Nagamangala Taluks; castor in parts of the Hunsur, T.-Narsipur and Mandya Taluks; and togari in parts of the Hunsur, Heggaddevankote, T.-Narsipur and Mandya Taluks. These are being harvested.

Probable outturn of crops :—

Seringapatam—Paddy	... ...	Yield 12 annas.
Malvalli—Paddy	.. ..	„ 8 „
Seringapatam—Ragi	.. ..	„ 12 „
Malvalli—Ragi	... ...	„ 8 „
Malvalli—Samè	... ...	„ 8 „
Hunsur—Togari, castor and gingelly	... ...	„ 12 „ each.

10. Prospects of the season good. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Mysore, Hunsur, Gundlupet, Nanjangud and T.-Narsipur Taluks, public health generally good.

12. Cattle are reported to be healthy in all the taluks except in the Talkad Hobli of the T.-Narsipur Taluk, where they are reported to be suffering from "Foot and Mouth" disease. Water and fodder available throughout.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Standing crops., viz., avare, togari, sugar-cane, chillies, gingelly, etc., are reported to be in good condition.

Crop sown.—Sugar-cane, is being sown in the Channarayapatna Taluk.

Crops harvested.—Avare in the Hassan, Arsikere and Channarayapatna Taluks; Bengal gram in the Arsikere and Channarayapatna Taluks and the Alur Sub-Taluk; horse gram in the Arsikere, Channarayapatna and Belur Taluks and the Alur Sub Taluk; and sugar-cane in the Channarayapatna Taluk. These are being harvested.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks, and cholera in two villages in the Alur Sub-Taluk and in parts of the Manjarabad Taluk, public health generally good.

12. Cattle generally healthy. Rinderpest among cattle in Manjarabad is reported to be declining and that in Arsikere it is reported to have subsided. In parts of the Hassan and Belur Taluks, the disease among cattle is still prevalent. It is reported that the Cattle Disease Inspector has been informed of these. Water and fodder available.

SHIMOGA.

8. Market well supplied.

9. *Standing crops, viz.*, togari, avare, green gram, black gram, Bengal gram, horse gram and sugar-cane are in good condition.

Crop harvested.—Sugar-cane is being milled in portions of the Shimoga, Shikarpur, Sorab, Nargar and Tirthahalli Taluks and the Kumsi Sub-Taluk.

Probable outturn of crops:—

Honnali Taluk—Yennegar cholum	...	Yield 4 annas.
Coriander	...	„ 8 „
Cotton	...	„ 10 „
Bengal gram	...	„ 10 „
Nagar Taluk—Sugar-cane	...	„ 4 „
Paddy	...	„ 12 „
Arecanut	...	„ 6 „
Tirthahalli Taluk—Arecanut	...	„ from 10 to 14 as.
Sugar-cane	...	„ 10 annas.
Kumsi Sub-Taluk—Sugar-cane	...	„ from 10 to 12 as.
Paddy	...	„ 6 to 8 annas.
Horse-gram	...	„ 8 to 10 „

10. Prospects of the season generally good. Food stuffs available in sufficient quantities.

11. Public health generally good. But plague is prevalent in the Tirthahalli town. It is subsiding in the Shimoga and Honnali Taluks and the Kumsi Sub-Taluk.

12. Cattle are healthy, except in portions of the Sorab and Nagar Taluks, where murrain is prevalent. It is subsiding in the Shimoga, Channagiri, Honnali, Sagar and Tirthahalli Taluks. Water and fodder availble.

KADUR.

Not received.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops, viz*, white cholum, sugar-cane, Bengal gram, cotton, paddy and castor, are reported to be in fair condition except in the Challakere Taluk, where rain is wanted.

Crops sown.—Nil.

Crops harvested and their outturn:—Cotton and castor seeds in the Holalkere and Davangere Taluks, yield 8 annas; sugar-cane in the Davangere and Molakalmuru Taluks, yield from 8 to 12 annas; togari in the Chitaldrug Taluk and the Harihar Sub-Taluk, yield from 4 to 8 annas; horse gram in the Jagalur and Hosdurga Taluks, yield from 4 to 8 annas; navane, cholum and ragi in the Jagalur Taluk, yield 8 annas.

10. Prospects of the season fair. Food stuffs available.

11. Except for plague in some parts of the Davangere and Jagalur Taluks, public health generally good.

12. Gattle healthy. Water and fodder available.

P. PALPU, L.M.S. & D.P.H.,
Deputy Sany. Comr., Mysore Govt.

OFFICIAL MEMORANDUM.

No. 7638-45, *dated* 18*th*—23*rd January* 1908.

Subject:—

Government were pleased to prescribe in their Order No. R. 9717-26—R. M. 264-06-4, dated 3rd May 1907, a half yearly return of prices in place of the old monthly return. The return according to the above order is due in this office on 1st October and 1st April each year. The returns for the half year ending 30th September 1907 were received from the several districts on the following dates:

1. Shimoga, 7th October.
2. Chitaldrug, 29th October.
3. Tumkur, 8th November.
4. Bangalore, 12th November.
5. Kadur, 19th November.
6. Kolar, 20th November.
7. Hassan, 30th November.
8. Mysore, 12th December.

Recorded with the observation that no district submitted the return in time. The longest delay occurred in the Mysore District, the return having been submitted after a delay of two months and twelve days. It is hoped that in future the return will be submitted punctually on the due date.

The fluctuation in prices of the same article in different districts is very noteworthy in some cases. Thus the average price of Haraka is quoted at fifty-one and a quarter seers per rupee in Bangalore and fourteen and a half seers in Chitaldrug, while the price in the other districts is on an average, twenty-five seers a rupee. The discrepancy may be due to the fact that the grain is grown in small quantities and there is not much demand for it in some parts.

Again coriander is stated to be sold in the malnad parts of the State very cheap, *viz.*, fifty-four seers a rupee in Hassan, forty-two and a half in Shimoga and thirty and a half in Kadur, while the average price in the maidan parts is sixteen seers a rupee. There must be evidently some mistake in this which requires to be cleared up.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

Statement showing the Average Price of different Grains in the Mysore State for the half year ending 30th September 1907.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11 Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7¾	6 to 6½	seers per rupee.
Ragi ...	20	11 to 12	

Agricultural operations.—Ploughing of fields.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Standing crops* are reported to be in good condition.

Crops harvested.—Karthika paddy, ragi and horse gram are being harvested. About 2½ acres of sugar-cane is reported to have been harvested during the week in the Bangalore Taluk.

10. Prospects of the season good. Food stuffs sufficient. But their prices are high.

11. Except for plague, prevailing in parts of almost all the taluks, public health generally good.

12. Cattle healthy. But "Doddaroga" is reported to be prevalent in some of the villages of the Malur and Virupakshipur villages of the Channapatna Taluk. Water and fodder available throughout.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Crop sown.—Vaisakhi paddy in Kolar, Bowringpet, Mulbagal, Siddlaghatta and Srinivaspur; and cholam and ragi in Bowringpet.

Crops harvested.—Paddy in Kolar and Malur; avare and horse gram in Kolar, Mulbagal, Malur and Srinivaspur; togari in Bowringpet and Gudibanda; sugar-cane in Kolar, Siddlaghatta, Chikballapur, Bagepalli, Goribidnur and Gudibanda; and horse gram in Bowringpet and Bagepalli.

10. Prospects of the season generally good. Food stuffs available.

11. Except for the prevalence of plague in the Kolar Gold Fields, Mulbagal, Siddlaghatta, Chikballapur and Malur and in a few villages of the Siddlaghatta and Goribidnur Taluks, small-pox in parts of Srinivaspur and cholera in the villages of Tavalur and Nangli in the Mulbagal Taluk, public health generally good.

12. Cattle generally healthy. But "Sappe roga" prevails in Mittahalli, Chilakalnerupu hobli of the Siddlaghatta Taluk. Enquiries it is reported are being made to find out whether "Rinderpest" is prevailing among cattle in the Kolar Gold Fields.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are in moderate condition.

Crops sown.—Paddy in Maddagiri, Sira, Pavagada, Kunigal and Koratagere; and cholam in Sira.

Crops harvested.—Paddy in Tumkur, Gubbi and Kunigal; sugar-cane in Tumkur and Gubbi; avare and togari in Maddagiri and Kunigal; horse gram in Maddagiri and Pavagada; bengal-gram in Chiknayakanhalli, Sira, Gubbi and Pavagada; and cholam in Sira.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in the towns of Tumkur, Chiknayakanhalli and Gubbi; and ague in Tiptur, Public health generally good.

12. Except in the Chikdhalavatta village of the Maddagiri Taluk, Handankere in the Chiknayakanhalli Taluk, and Rajavanti and Hoskote in the Pavagada Taluk, cattle healthy. Fodder available. Water available except in certain villages of Tiptur and Turuvekere where it is reported to be diminishing.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Seringapatam and Gundlupet Taluks are being ploughed.

Standing crops are reported to be in good condition in all the taluks.

Crops harvested.—Horse gram in parts of the Heggaddevankote, T.-Narsipur and Nagamangala Taluks; Bengal gram in parts of the Yedatore, T.-Narsipur and Nagamangala Taluks; paddy in parts of the Heggaddevankote and Nagamangala Taluks; togari in parts of the Hunsur and Heggaddevankote Taluks; coriander, menthya, avare and chillies in parts of the Yedatore Taluk; castor and gingelly in parts of the Hunsur Taluk; sugar-cane in parts of the T.-Narsipur Taluk; and ragi in parts of the Nagamangala Taluk; these are being harvested.

Probable outturn of crops :—

Hunsur—Togari, castor and gingelly	... ...	Yield 12 annas.
Seringapatam—Paddy	... ...	„ 12 „
T.-Narsipur— „	... ...	„ from 12 [illegible] annas.
Malvalli—Paddy	.. ..	„ 8 annas.
Seringapatam—Ragi	.. ..	„ 12
T.-Narsipur— „	.. ..	„ from 12 to 14 annas.
Malvalli—Same	... .	„ 8 annas.
T.-Narsipur—Cholum, horse gram and avare	... ...	„ 12 to 16 annas each.

10. Prospects of the season good. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Mysore, Hunsur, Gundlupet, Nanjangud and T.-Narsipur Taluks, public health generally good.

12. Cattle are reported to be healthy in all the taluks, except in the taluk of T.-Narsipur. "Foot and Mouth" disease in some of the villages of the Sosale Hobli and "Doddaroga" in Chandravalli village of the T.-Narsipur Taluk are said to prevail among cattle. Water and fodder available throughout.

HASSAN.

8. Market well supplied.

9. *Standing crops., viz.*, avare, sugar-cane, chillies, gingelly, etc., are reported to be in good condition.

Crops harvested.—Avare in the Hassan, Arsikere, Hole-Narsipur, Belur and Arkalgud Taluks; Bengal gram in the Hole-Narsipur, Channarayapatna and Arsikere Taluks; sugar-cane in the Channarayapatna Taluk; castor in the Hassan and Arsikere Taluks; horse gram in the Arkalgud Taluk and the Alur Sub-Taluk; togari and chillies in the Arkalgud Taluk; these are being harvested.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks, and for cholera in parts of the Alur Sub-Taluk, public health generally good.

12. Cattle generally healthy. The disease prevalent among cattle in the Arsikere Taluk has been reported to have subsided. But it is still prevalent among them in parts of the Manjarabad, Belur and Hassan Taluks. It is reported that the affected cattle in the Hassan Taluk are being treated as per instructions received from the Inspector of Cattle Diseases. Water and fodder available.

SHIMOGA.

8. Market well supplied.

9. *Standing crops, viz.*, togari, avare, green gram, black gram, [illegible] gram, horse gram and sugar-cane are in good condition.

Probable outturn of crops :—

Kumsi Sub-Taluk—Paddy	...	... Yield from 10 to 12 as.
Sugar-cane	...	... „ do
Arecanut		
Ragi	...	... „ from 6 to 8 annas.
Horse-gram	...	... „ 8 to 10 „
Nagar Taluk—Paddy	...	... „ 12 „
Sugar-cane	...	... „ 14 „
Arecanut	..	... „ 6 „

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Public health generally good. But plague in portions of the Shikarpur Taluk, cholera in the Sorab Taluk, and small-pox in the Channagiri Taluk, are prevalent. Plague is subsiding in the Shimoga and Honnali Taluks and the Kumsi Sub-Taluk.

12. Cattle healthy, except in portions of the Sorab and Nagar Taluks, where they are still suffering from Murrain. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Ploughing in the Yedahalli Sub-Taluk and manuring jagayet lands in the Koppa Taluk.

Standing crops.—Chikmagalur—Paddy, sugar-cane, Bengal-gram, horse gram, fenugreek, coriander, gingelly, avare, togari, coffee and wheat. Kadur—Bengal-gram, wheat, sugar-cane, cholum, avare and Vaisakhi paddy. Tarikere—Bengal-gram, horse gram, avare, togari, paddy, ragi and cholum. Koppa—Pepper, areca, coffee and sugar-cane. Mudgere—Paddy, coffee, ragi and areca. Yedahalli—Areca, coffee and sugar-cane. All the above are reported to be in good condition.

Crops harvested and their yield.—

Chikmagalur—Paddy and coffee	...	...	Yield 12 annas.
Horse gram and coriander	...	...	„ 10 „
Sugar-cane	...	...	„ 8 „
Togari	...	...	„ 6 „
Kadur—Nil.			
Tarikere—Paddy and ragi	...	...	„ 8 „
Cholum	...	...	„ 12 „
Koppa—Areca	...	...	„ 14 „
Mudgere—Paddy and coffee	...	...	„ 12 „
Ragi and areca	...	...	„ 8 „
Yedahalli—Sugar-cane and areca	...	...	„ 12 „

10. Prospects of the season good. Food stuffs sufficient. Paddy is being largely exported from the Chikmagalur Taluk to Bombay and other places.

11. Except for plague in the towns of Birur, Tarikere, Mudgere and a few villages in the Chikmagalur and Tarikere Taluks, and cholera in a few villages of the Mudgere Taluk, public health generally good.

12. Cattle generally healthy "Dodda roga" is reported to be subsiding in Chikmagalur, Mudgere, Kadur and Yedahalli. The Amildar of Koppa reports that out of 15 heads of cattle attacked with "Dodda roga" in the Gunavanthi village, 4 died and 11 recovered; while in the Bandagadi village, 26 heads of cattle died and three more are suffering from it; and it is also stated that the disease is being checked by the timely adoption of both preventure and curative measures. Water and fodder available.

N. B.—Report from Sringeri not received.

CHITALDRUG.

8. Market well supplied.

9. *State of standing crops, viz*, white cholum, Bengal gram, sugar-cane, cotton and horse gram are in fair condition in all the taluks, except Challakere where rain is wanted.

Crops sown.—Paddy in the Molakalmuru Taluk.

Crops harvested and their yield.—Sugar-cane, cotton and castor in the Chitaldrug, Holalkere and Davangere Taluks, yield from 4 to 8 annas. Bengal-gram in the Hiriyur and Davangere Taluks, yield from 2 to 8 annas. Togari in the Hiriyur, Davangere and Hosdurga Taluks, yield from 2 to 8 annas. Wheat in the Hiriyur Taluk, yield from 2 to 4 annas.

10. Prospects of the season fair. Food stuffs available.

11. Except for plague in some parts of the Davangere and Jagalur Taluks, public health generally good.

12. Cattle healthy. Water and fodder available.

BANGALORE,

In Sringeri—Areca ...	...	...	„ 12 „

10. Prospects of the season good. Food stuffs sufficient. Paddy is being largely exported from Chikmagalur and other villages of the same taluk to Bombay and other places.

11. Except for plague in the towns of Birur, Tarikere, Mudgere and a few villages of the Chikmagalur Taluk and cholera in a few villages of the Chikmagalur and Mudgere Taluks, public health generally good.

12. Cattle generally healthy. "Dodda Roga" is reported to be subsiding in Chikmagalur, Mudgere, Kadur and Yedahalli; and it is stated that it has broken out a fresh in the Gunavanthe village, Koppa Taluk, and that as per instructions of the Inspector of Cattle Diseases, both preventive and curative measures have been adopted to check its spread. Water and fodder available.

BANGALORE,
5th February 1908.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

No. R. 4903—*Agri.* 85-07-2, *dated* 4*th February* 1908.

OFFICE MEMORANDUM.

The following resolution of the Government of India, regarding the Universal and International Exhibition to be held at Brussels, in the year 1910, is republished for general information :—

By Order,
C. S. BALASUNDARAM IYER,
Offg. Secy to Govt., Gen. & Rev. Depts.

No. 22—42—1.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

COMMERCIAL EXHIBITION.

RESOLUTION.

Calcutta, the 6th January 1908.

The following Notification of the Universal and International Exhibition to be held at Brussels in the year 1910 is published for general information. The Government of India have decided not to participate in the Exhibition.

KINGDOM OF BELGIUM.

Brussels Universal and International Exhibition organised for 1910 *under the High Patronage of His Majesty the King of the Belgians and the Honorary Presidency of His Royal Highness Prince Albert of Belgium.*

APPEAL TO EXHIBITORS.

Brussels, October 30*th* 1907.

A Universal and International Exhibition will open at Brussels in the month of April 1910, and will last for at least six months.

The four Universal and International Exhibitions previously held in Belgium, namely at Antwerp in 1885 and in 1894, at Brussels in 1897, and at Liege in 1905, proved eminently successful, and there is every reason to hope that their success will be equalled and even surpassed by the World's Fair now under organisation in the *Capital* of Belgium. The intended Exhibition will include, as to its chief divisions, the following Groups :—

I—Fine Arts.
II—Education.
III—Instruments and general methods connected with Letters, Science and Arts.
IV—Plant and general methods connected with Machinery.
V—Electricity.
VI—Civil Engineering.—Means of Transport.
VII—Agriculture.
VIII—Horticulture and Arboriculture.
IX—Forests.—Shooting.—Hunting.—Fishing.—Fruit gathering.
X—Articles of food.
XI—Mines.—Metallurgy.
XII—Decoration and furnishing of Public Buildings and private Houses.
XIII—Yarns, Woven Fabrics, Wearing Apparel.
XIV—Chemical Industry.
XV—Miscellaneous Industries.
XVI—Social Economy.
XVII—Public Health.—Charitable Institutions.
XVIII—Practical Education.—Economic Institutions.—Female Handicraft.
XIX—Trade.—Colonisation.
XX—Land and Sea Forces.
XXI—Sports.
XXII—Congresses and Conferences.

Brussels is extending day by day and the public Authorities do everything in their power to justify the name which it already has of being one of the finest *Capitals* of Europe.

Only recently its territory has been considerably added to by the incorporation of a large amount of land running alongside the *Bois de la Cambre,* the favorite resort of the Brussels people.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

(Report not received.)

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *State of standing crops.*—Sugar-cane, etc., are reported to be in good condition in the Hoskote, Dodballapur, Nelamangala, Kankanhalli, Anekal, Devanhalli and Closepet Taluks.

Crops harvested.—Ragi, avare, horse gram, paddy, etc., are being harvested in Hoskote, Kankanhalli, Magadi, Channapatna and Closepet, and sugar-cane is being milled in the Nelamagala and Magadi Taluks.

Prospects and probable outturn of crops are as follows:—

Paddy—yield from 6 to 12 annas in the Hoskote and Dodballapur Taluks.
" — " 4 to 8 " in the Nelamangala, Kankanhalli and Devanhalli Taluks.
Ragi — " 8 to 10 " in the Hoskote Taluk.
" — " 4 to 8 " in the Dodballapur, Nelamangala & Kankanhalli Taluks.
" — " 4 to 6 " in the Devanhalli Taluk.
" — " 6 to 10 " in the Channapatna Taluk.
Horse gram—yield from 12 to 14 annas in the Hoskote Taluk.
" — " 4 to 8 " in the Nelamangala Taluk.
Sugar-cane— " 14 annas in the Devanhalli Taluk.

10. Prospects of the season good. Stock of food stuffs sufficient. But their prices are ruling high.

11. Except for plague, prevalent in the towns of Channapatna and Devanhalli and also in some villages of almost all the taluks, public health generally good.

12. Cattle healthy, but "Doddaroga" is reported to be prevalent in the Malur hobli of the Channapatna Taluk. Water and fodder available.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Crop sown.—Vaisakhi paddy in Bowringpet, Mulbagal, Sidlaghatta, Malur and Srinivaspur and nát ragi in Bowringpet.

Crops harvested.—Karthika paddy in Kolar and Mulbagal; avare and horse gram in Kolar, Mulbagal, Malur and Srinivaspur; togari in Mulbagal and Gudibanda; sugar-cane in Kolar, Chintamani, Mulbagal, Chikballapur, Bagepalli, Goribidnur and Gudibanda; and horse gram in Bowringpet and Bagepalli.

10. Prospects of the season generally good. Food stuffs available.

11. Except for the prevalence of plague in the Kolar Gold Fields, Mulbagal, Sidlaghatta, Chikballapur and Malur and in a few villages of the Sidlaghatta, Chintamani and Goribidnur Taluks, small-pox in parts of Srinivaspur, and cholera in the villages of Tavalar and Nangli of the Mulbagal Taluk, public health generally good.

12. Cattle generally healthy. But "Sappe roga" prevails in Mittahalli, Chilakalnerpu hobli, Sidlaghatta Taluk, and "Rinderpest" in parts of the Gudibanda Sub-Taluk. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are in moderate condition in all the taluks, except in certain parts of Pavagada.

Crops sown.—Paddy in Tumkur, Maddagiri, Chiknayakanhalli, Sira and Koratagere; cholam in Maddagiri and Sira; and sugar-cane in Sira and Tiptur.

Crops harvested.—Avare, togari and castor in Maddagiri; Bengal-gram in Chiknayakanhalli, Sira, Gubbi, Tiptur and Turuvekere; sugar-cane in Gubbi, Tiptur and Turuvekere; gram and castor in Pavagada; paddy in Gubbi; and cholam in Sira.

10. Prospects of the season moderate.

11. Except for plague in the towns of Tumkur and Gubbi, and ague in Tiptur, public health good.

12. Except in parts of the Maddagiri, Chiknayakanhalli and Pavagada Taluks, cattle healthy in other parts. Water and fodder available in all parts of the district, except in certain parts of the Turuvekere Sub-Taluk.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Gundlupet and T.-Narsipur Taluks are being ploughed.

Standing crops are reported to be in good condition in all the taluks.

Crops harvested.—Paddy and ragi in parts of the Nagamangala Taluk; togari in parts of the Heggaddevankote Taluk; sugar-cane in parts of the T.-Narsipur Taluk; avare in parts of the Hunsur and T.-Narsipur Taluks; horse gram in parts of the Nagamangala and T.-Narsipur Taluks; Bengal gram in parts of the Hunsur, Yedatore, Heggaddevankote, T.-Narsipur and Nagamangala Taluks; these are being harvested. Ragi, paddy and horse gram in parts of the Krishnarajpete and Malvalli Taluks and togari and gingelly in parts of the Krishnarajpete Taluk are being threshed.

Probable outturn of crops:—

Malvalli—Samè paddy, horse gram and ragi ... ... Yield 8 annas each.

10. Prospects of the season good. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Mysore, Hunsur, Gundlupet, Nanjangud and T.-Narsipur Taluks, public health generally good.

12. Cattle are reported to be healthy in all the taluks, except in the Bannur Hobli, T.-Narsipur Taluk, where they are reported to be suffering from "Foot and Mouth" disease. Water and fodder available throughout.

HASSAN.

8. Market well supplied.

9. *Standing crops., viz.*, sugar-cane, chillies, gingelly, etc., are reported to be in good condition.

Crops sown.—Sugar-cane is being sown in the Channarayapatna Taluk.

Crops harvested.—Avare in the Arkalgud, Belur and Hole-Narsipur Taluks; horse gram in the Arkalgud Taluk and the Alur Sub-Taluk; Bengal gram in the Alur Sub-Taluk and the Channarayapatna and Hole-Narsipur Taluks; and sugar-cane in the Channarayapatna Taluk; these are being harvested.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks and for cholera in parts of the Alur Sub-Taluk, public health generally good.

12. Cattle generally healthy. The prevalence of disease among cattle in the Hassan town is declining and that it continues still in the Belur Taluk. Precautionary measures are being taken. Water and fodder available.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—The threshing of paddy and ragi continues in portions of the Shimoga Taluk.

Standing crops, viz., togari, avare, green gram, black gram, Bengal gram, horse gram and sugar-cane are in good condition.

Crops harvested.—Bengal gram is being harvested in the Shimoga, Channagiri and Honnali Taluks; sugar-cane is being milled in portions of the Shimoga and Tirthahalli Taluks; and arecanut is being gathered in portions of the Sagar and Tirthahalli Taluks.

Probable outturn of crops:—

Channagiri Taluk—Paddy	...	...	Yield from 8 to 12 as.
Ragi	...	...	„ do
Cholum	...	...	„ do
Bengal gram	...	...	„ from 2 to 6 annas.
Honnali Taluk—Castor	...	...	„ 8 annas.
Yennigar cholam	...	...	„ 4 „

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Public health generally good. But plague prevails in portions of the Shimoga Taluk, Tirthahalli town and the Kumsi Sub-Taluk.

12. Cattle healthy, except in portions of the Shimoga, Sorab and Nagar Taluks, where Murrain prevails. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Ploughing in the Tarikere Taluk and manuring of bagayat lands in the Koppa Taluk are going on.

Standing crops:—

In Chikmagalur—Paddy, sugar-cane, coffee, Bengal gram, fenu-greek, gingelly, horse gram, avare, togari and wheat.

In Kadur—Bengal gram, wheat, cholum, sugar-cane, avare and Vaisakhi paddy.

In Tarikere—Bengal-gram, sugar cane, avare, togari and horse gram.

In Koppa—Pepper, areca, coffee and sugar-cane.

In Yedahalli—Areca, coffee and sugar-cane.

In Sringeri—Areca.

All the above are reported to be in good condition.

Crops harvested and their yield :—

In Chikmagalur—Coffee	...	...	Yield 12 annas.
Sugar-cane and avare	...	...	„ 8 „
Togari	...	...	„ 6 „
Horse gram	...	...	„ 10 „
In Tarikere—Paddy and ragi	...	..	„ 8 „
Cholum	...	...	„ 12 „
In Koppa—Areca	...	..	„ 14 „
Coffee	..	...	„ 14 „
In Yedahalli—Sugar-cane	...	..	„ 12 „
Areca	...	..	„ 12 „
In Sringeri—Areca	..	..	„ 12 „

10. Prospects of the season good. Food stuffs sufficient. Paddy is being largely exported from the Chikmagalur Taluk to Bombay and other parts.

11. Except for plague in the towns of Birur, Tarikere and a few villages of the Chikmagalur Taluk, public health generally good.

12. Cattle generally healthy. "Dodda Roga" is reported to be subsiding in all the taluks. Water and fodder available

N. B.—Report from Mudgere not received.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops, viz.*, sugar-cane, cotton, castor, paddy, Bengal gram, horse gram and white cholum are reported to be in good condition owing to fall of rain in the week.

Crop sown.—Paddy in the Molakalmuru Taluk.

Crops harvested and their yield.—White cholum in the Chitaldrug and Hiriyur Taluks, yield from 2 to 8 annas. Sugar-cane and castor in the Chitaldrug, Holalkere and Molakalmuru Taluks, yield from 4 to 12 annas. Cotton in the Chitaldrug, Holalkere and Hosdurga Taluks, yield from 4 to 12 annas. Bengal gram in the Hiriyur and Holalkere Taluks, yield from 4 to 8 annas. White togari and horse gram in the Holalkere Taluk, yield from 2 to 4 annas.

10. Prospects of the season fair. Food stuffs available.

11. Except for plague in some parts of the Davangere and Jagalur Taluks, public health generally good.

12. Cattle healthy except in some parts of the Holalkere Taluk and the Harihar Sub-Taluk, where murrain is reported to exist. Water and fodder available.

BANGALORE,
12th February 1908.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

No. G. 4672—G. M. 212-07-2, dated 5th February 1908.

The following Resolution of the Government of India in the Department of Commerce and Industry is published for general information :—

By Order,

C. S. BALASUNDARAM IYER,
Offg. Secy. to Govt., Gen. & Rev. Depts.

No. 10724-10740—246.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

GEOLOGY AND MINERALS.

RESOLUTION.

Dated Calcutta, the 18th December 1907.

The following Royal Warrant is published for general information :—

WHITEHALL, *October* 17, 1907

The King has been pleased to issue a Warrant under His Majesty's Royal Sign Manual to the following effect :—

Edward, R. & I.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India, to all to whom these Presents shall come, Greeting!

Whereas We are desirous of distinguishing by some mark of Our Royal Favour the many heroic acts performed by Miners and Quarrymen and others who endanger their own lives in saving or endeavouring to save the lives of others from perils in Mines or Quarries within Our Dominions and in territories under Our Protection or Jurisdiction, We do by these presents for Us, Our Heirs, and Successors institute and create a new Medal to be awarded for such acts of gallantry.

Firstly.—It is ordained that the Medal shall be of two classes which shall be designated and styled "The Edward Medal of the First Class" and "The Edward Medal of the Second Class."

Secondly.—It is ordained that the Edward Medal of the First Class shall consist of a circular Medal of Silver with Our Effigy on the obverse, and on the reverse a design representing the rescue of a miner with the inscription "for courage."

Thirdly.—It is ordained that the Edward Medal of the Second Class shall consist of a Circular Medal of Bronze of a similar design.

Fourthly.—It is ordained that the Medals shall only be awarded to those of Our Faithful Subjects and others who, in saving or endeavouring to save the lives of others from perils in Mines and Quarries within Our Dominions and in territories under Our Protection or Jurisdiction, have endangered their own lives, and that such award shall be made only on a recommendation to Us by Our Principal Secretary of State for the Home Department.

Fifthly.—It is ordained that the names of those upon whom We may be pleased to confer either of these Decorations shall be published in the *London Gazette*, and that a Register thereof shall be kept in the Office of Our Principal Secretary of State for the Home Department.

Sixthly.—It is ordained that each Medal shall be suspended from the left breast and the riband, of an inch and three-eighths in width, shall be dark blue with a narrow yellow stripe on either side: Provided that when the Medal is awarded to a woman it shall be worn on the left shoulder, suspended from a riband of the same width and colour, fashioned into a bow.

Seventhly.—It is ordained that any act of gallantry which is worthy of recognition by the award of the Edward Medal, but is performed by one upon whom the Decoration has already been conferred may, on a recommendation to Us by Our Principal Secretary of State for the Home Department, be recorded by a Bar attached to the riband by which the Medal is suspended; and for every such additional act an additional Bar may be added.

Eighthly.—In order to make such provision as shall effectually preserve pure these most honourable Decorations it is ordained that if any person, on whom either of such Decorations is conferred be guilty of any crime or disgraceful conduct which, in Our judgment disqualifies him for the same, his name shall, by an especial Warrant under Our Royal Sign Manual be forthwith erased from the Register of those upon whom the said Decoration shall have been conferred and his Medal shall be forfeited. And every person to whom the said Medal is given shall before receiving the same, enter into an agreement to return the same, if his name shall be so erased as aforesaid under this regulation. It is hereby further declared, that We, Our Heirs and Successors, shall be the sole judges of the circumstances demanding such forfeiture. Moreover, We shall at all times have power to regrant a Medal to any person whose Medal may at any time have been forfeited.

Given at Our Court at *Saint James's*, the thirteenth day of *July*, one thousand nine hundred and seven, in the seventh year of Our Reign.

By His Majesty's Command,

H. J. GLADSTONE.

ORDERED that the paper be published in the supplement to the *Gazette of India*, and that copies be forwarded to the Local Governments and Administrations noted in the margin, to the Finance and Foreign Departments, the Railway Board, the Chief Inspector of Mines in India and the Indian Mining Association, for information.

The Secretary to the Government of Madras, Revenue Department.
" " " " Bombay " "
" Chief Secretary to the Government of Bengal.
" " " " the United Provinces.
" " " " Punjab.
" Revenue Secretary " " Burma.
" Chief Secretary to the " " Eastern Bengal and Assam.
" Honourable the Chief Commissioner, Central Provinces.
" Honourable the Resident at Mysore and Chief Commissioner of Coorg.
" Chief Commissioner of Ajmer-Merwara.
" Honourable the Agent to the Governor General and Chief Commissioner, North-West Frontier Province.
" Agent to the Governor General in Baluchistan.

W. L. HARVEY,

Secy. to the Government of India.

SUPPLEMENT TO

The Mysore Gazette.

PUBLISHED BY AUTHORITY.

BANGALORE, THURSDAY, FEBRUARY 13, 1908.

THE MYSORE SEASON AND CROP REPORT.

1905-06.

TABLE OF CONTENTS.

	Pages.
General Note	i—iii
PART I.	
Agricultural Statistics	1—105
PART II.	
Out-turn of certain Selected Crops	1— 40
PART III.	
Retail Prices of some Principal Articles of Food	1— 16
PART IV.	
Monthly and Annual Rainfall Tables	1— 8

GENERAL NOTE. 75

Hitherto three publications were annually issued from the office of the Director of Statistics, *viz*:—

1. Agricultural statistics for the current year and the previous four years.

2. Outturn of certain selected crops for each year with figures for previous years commencing from 1897-98.

3. Retail prices of some principal articles of food for each year with figures for a number of previous years.

In accordance with Government Order No. R. 778—Agri. 172-06-3, dated 1st August 1907, all these three publications are now published in one volume commencing with the year 1905-06 together with a statement showing the monthly and annual rainfall as Part IV. The figures are confined to the year under report and the previous year.

2. The following is a brief summary of the more important variations in the figures.

PART I.—Agricultural Statistics.

There is an increase of 2,640 acres in the total area, (column 2 Table A-1 area according to professional survey) due chiefly to more accurate measurements in connection with the revision settlement operations in the Challakere and the late Budihal Taluks.

2. The total area of the State is nearly 19 million acres, out of which no returns have been received for over $1\frac{1}{3}$ millions. Out of the balance of about $17\frac{1}{2}$ million acres, $1\frac{4}{5}$ million acres are under Forest. It should be explained that though in the explanatory memorandum issued with Govt. Order No. 3473-80—R 1100, dated 6th October 1897, under para 5, Forest means any land classed or administered as Forest and includes also District Forests, yet as the latter are not separately mapped, Amrut Mahal, gomal and kharab lands which under the Forest Regulation and Rules are treated as District Forests, are not shown under this column but in the next column. The rights and privileges of raiyats in the latter comprise mostly of grazing and dry fuel while all other produce is collected by the Forest Department. Thus the area which should come under Forests in column 2 if properly classified would be far in excess of the total, *viz.*, 1,800,000 acres, shown under that column. The total extent of free-grazing and Hulbanni lands being about 4,922,995 acres and State Amrut Mahal Kavals about 418,145 acres as per area return furnished by Districts, the aggregate total of lands really administered by the Forest Department would be very nearly 7 million acres. About $8\frac{2}{3}$ million acres are available for cultivation, about $1\frac{2}{5}$ million acres are still unoccupied, while the total occupied area amounts to about $7\frac{1}{4}$ million acres, of which $5\frac{2}{3}$ millions were cultivated during the year.

PART IV.—Rainfall.

3. The rainfall during the year was defective, the average total for the State being only 27·37 inches as against 29·69 inches in the previous year and an average of 36·93 inches for the previous 35 years. The year 1904-05 was in itself a year of deficient rainfall and the year 1905-06 was worse. In all the districts except Hassan and Shimoga there was less rainfall than during the previous year. The result of such successive failure of the seasons was disastrous to the crops as explained in the following paragraphs.

PART I.

4. (*a*) The total net area cropped (Table A-2) during the year 1905-06 was 5,779,850 acres being less than that of the previous year by 146,846 acres or a percentage of 2·4. "Current fallows" (figure in column 5) showed a corresponding increase of about 141,000 acres.

(*b*) The decrease in the net area cropped was spread over all the districts except Bangalore and Chitaldrug. The largest decrease occurred in the Shimoga District (97,000 acres). Next come in order the Districts of Tumkur (with 45,000 acres), Kolar (with 17,000 acres), Kadur (12,000) acres, Mysore (10,000 acres) and Hassan (4,000 acres).

5. There was a decrease of nearly 45,000 acres in the area irrigated (Table A-2 column 13), the bulk of which (28,000 acres) was in the Shimoga District and the remainder in the Kolar and Tumkur Districts; the decrease occurred largely under areas irrigated by tanks.

6. (*a*) *Areas under different crops, Table A-3.*—There was decrease under several heads while there was an increase under some. The decrease was distributed mainly as under :—

	Acres.
Ragi	62,421
Rice	43,916
Oil-seeds	27,958
Condiments	25,277
Gram	27,576
Kambu	23,806
Other food grains including pulses	71,724
Total ...	282,678

It may be noted that the decrease under "other food grains including pulses" occurred in all the districts except Chitaldrug ; that under ragi in all except Hassan and Kadur ; that under rice in all the districts except Mysore ; that under oil-seeds in all except Tumkur and that under condiments in all except Hassan. All the districts except Bangalore, Kadur and Chitaldrug exhibited a decrease under gram and all the four districts in which kambu is grown showed a decrease under that head.

(*b*) There was increase under the following heads :—

	Acres.
Cholam	44,871
Sugar-cane	1,561
Cotton	15,164
Miscellaneous non-food crops (like mulberry, etc.)	30,752
Total ...	92,348

7. *Table C.*—The incidence of total Land Revenue (excluding cesses) per head of population for the whole State, including alienated villages, was Rs. 1-12-4 during the year as against Rs. 1-12-5 in the previous year. But taking only the fully assessed area and the population of that area the incidence works out at Rs. 1-13-6 per head as against Rs. 1-12-8 in the previous year.

8. *Table D.—Varieties of tenure.* (*a*) There was a decrease of 15,037 in the number of small holdings held separate and direct from Government (the bulk of which, *viz.*, 9,807, occurred in the Shimoga District) though there was an increase of 57 in the total number of villages. The largest increase in the number of villages in which the holdings exist also occurred in the Shimoga District. This large decrease, in spite of the increase in the number of villages, in the Shimoga District, deserves investigation. There was increase of 43,294 in the number of holders or share-holders and the average area of each holding was 6·66 acres in the year and the average assessment of each holding 8·73 rupees as against 6·59 acres and 8·69 rupees respectively for the previous year.

(*b*) There was an increase of 22,916 acres in the gross area held wholly or partially revenue free and of 804 in the number of holders of such tenure. The Deputy Commissioners of Districts should in future explain briefly the causes which account for variations under these heads.

9. *Table E.*—There were during the year 1,494 transfers of lands involving 3,444 acres by order of Courts as against 1,313 involving 6,027 acres in the previous year. Transfers by private contract or gift numbered 17,014 involving 88,335 acres against 16,374 involving 77,716 acres in 1904-05.

10. *Table G.*—While all the returns are for the official year the returns relating to coffee alone are for the calendar year. The total area under coffee during the year was 101,489 acres against 101,319 in the previous year. Even though the area increased by 170 acres, the total yield decreased by about 50 per cent, being 5,964,544 lbs. against 11,874,735 lbs. in 1905.

11. *Table H.*—The area under cinchona was 112 acres during 1905-06 against 111 acres during 1904-05, but the quantity of bark collected during the year was only 275 lbs. against 3,000 in 1904-05.

PART II.—Out-turn of certain Selected Crops.

12. Part II contains the area and out-turn in regard to paddy, ragi, horse-gram, cholam and sugar-cane. The total area under rice given in Part I Table A-3 differs from that shown under paddy as given in Part II for the year 1904-05, largely in the districts of Shimoga and Hassan ; in regard to ragi the figures are the same in both the Parts and in regard to sugar-cane the difference is very slight ; while under cholam again there is large difference between the figures in these two Parts in the districts of Mysore and Chitaldrug. The Deputy Commissioners of districts should in future fully explain the causes which contribute to this variation.

13. (*a*) In the out-turn of paddy which is the chief staple article of food in the Province for the higher and the middle classes, there was a decrease of about 100,000 khandies which is attributable partly to the decrease in the total area under paddy and partly to poor harvest. Taking the State as a whole, the out-turn was less than 50 per cent of the standard out-turn.

(*b*) In the Mysore District alone there was an increase of 4,200 acres in area and increase of 153,745 khandies in yield thus showing that the harvest during the year was much better than that of the previous year. In the Shimoga District on the other hand, though the area under the crop had increased by about 2,900 acres, the estimated actual out-turn went down from 10·7 annas to 7·5 annas of the standard out-turn.

14. Ragi, the staple article of food of the raiyat population, fared better during the year. Though there was decrease in the area under ragi, the yield was better than in the previous year by 254,000 khandies. All districts except Hassan and Chitaldrug contributed to this increase. In the Hassan District, though the area under ragi showed an increase of nearly 2,500 acres there was a decrease in the yield amounting to 22,000 khandies.

15. *Horse-gram.*—The area under this crop and its estimated actual yield during the year increased by about 21,000 acres and 99,400 khandies, respectively. In the districts of Chitaldrug and Hassan there was decrease both under area and out-turn. In the Kolar District there was decrease in area under crop, but increase in out-turn; in the Chitaldrug District the case was the very reverse, there being a decrease in out-turn though there was increase in area. The crop in the Bangalore and Mysore Districts seems to have been very good as in the former the yield rose from 24,130 to 44,083 khandies and in the latter from 86,657 to 160,483 khandies.

16. *Cholam.*—Though there was an increase of 61,000 acres in the area under this crop the yield was less than that of the previous year by 15,100 khandies. In the Mysore and Chitaldrug Districts where this crop is largely grown, the harvest seems to have been poor as there was decrease in yield though the area under crop had increased.

17. (*a*) *Sugar-cane.*—The area under this crop increased by about 1,300 acres and the yield by 337,000 maunds of jaggory.

(*b*) In the districts of Bangalore and Kolar there was increase in production though there was decrease in area under crop and in these two districts the crop seems to have prospered. In the districts of Tumkur and Kadur the case was the reverse, the yield having decreased in spite of increase in area. In the districts of Chitaldrug and Shimoga both the area and the yield decreased. In Mysore and Hassan there was increase both in area under crop and in yield. The out-turn seems very poor in Hassan and Kadur.

PART III.—Prices of some Principal Articles of Food.

18. Prices of food grains, namely, rice, 1st sort, rice, 2nd sort, ragi, cholam and Bengal gram, were higher throughout the year as compared with the preceding year in all the districts but the price of salt was lower in all the districts except Chitaldrug where it remained almost stationary.

A. RANGASAMI IYENGAR,
Director of Agricultural and other Statistics.

BANGALORE,
4th December 1907.

Table A-4	88—105

EXPLANATORY MEMORANDUM ON THE ANNUAL AGRICULTURAL STATISTICAL RETURNS A TO E AND INSTRUCTIONS FOR COMPILING THEM.

1. The revenue year commences on 1st July and ends on 30th June. The returns are due in this office on or before the 15th August following.

2. *Table A.*—Table A consists of four sections, *viz.*, A-1, A-2, A-3 and A-4 and contains figures for districts (pages 1-9) as well as for taluks (pages 25-105).

3. *Table A-1.*—Column 2 shows the gross area as ascertained by the Survey and Settlement Department, and is subject to correction according as errors are discovered in re-survey of tracts.

(*a*) Column 3 shows the areas of alienated tracts (such as Jahgir, Jodi, Sarvamanyam and Kayamgutta villages) for which the statistics required for the other sections of the table are not at present forthcoming in whole or in part. When such statistics become available the area in this column will be reduced and that in column 4 will correspondingly be increased.

(*b*) Column 4 gives the remainder which is dealt with in Tables A-2 and A-3.

4. *Table A-2*—Column 2, "Forest" means any land classified or administered as forest under the Forest Rules, and includes District Forests and State Forests and Plantations separately mapped. Details of these should be invariably noted at foot of the return.

(*a*) Column 3 includes land absolutely unfit for cultivation, land reserved as pasture (gomal lands and kavals of sorts), public topes and Government plantations, and also all lands covered by buildings, roads, water, etc., or otherwise devoted to uses other than agriculture. When with due sanction any of these areas are made available for cultivation, they should be transferred from this column to column 5 or 6. The extent of "Pot Kharab" forming part of survey numbers should be included under this column, the same being excluded from columns 4, 5 and 6.

(*b*) Column 4 shows the area of assessed unoccupied land.

(*c*) Columns 5 and 6 show the areas of assessed occupied land not cultivated ("Kabuli-banjar") and cultivated respectively as found in the abstract at foot of the Pahani Account (Village Account Form No. 3). Minor Inams in Government villages are included herein. In Mysore there is no system of fallows properly so called. Column 5 will therefore show land in occupation kept uncultivated from whatever cause.

(*d*) The total of these 5 columns will of course equal the figure shown in column 4 of Table A-1.

(*e*) Columns 8 to 12 show only the actual area of irrigated land, areas (if any) cropped more than once being reckoned but once.

(*f*) Columns 14 to 17 should contain the actual area of irrigated crops, areas cropped more than once being counted as separate areas for each crop.

5 *Table A-3.*—This is based entirely on the Pahani Account (Village Account Form No. 3), and shows the gross cultivated area under each crop irrespective of irrigation and double cropping, the area under the latter being included in the statement but subtracted in column 42. The area dealt with is that shown in column 6 of Table A-2. In cases where two or more crops are grown together, an estimate is made of the area covered by each, and the areas so estimated are separately returned. The estimate is made by the shanbhog on his own judgment. The areas comprised in this return are the areas actually sown, whether the crop comes to maturity or not. The failure of the crop should affect not its area but its outturn. Where fields owing to the failure of the first sowings have been devoted to other crops, the area sown by the first sowings should be omitted.

The crops to be selected for inclusion in certain heads of this table are as follows:—

Column 9.—*Gram* (pulse) should include horse gram, Bengal gram, green and black grams.

Column 10.—*Other food grains including pulses.*—Samè, haraka, navanè, avarè or ballar, tuvar, or togari, tadagani or alasandi, etc.

80

Column 15.—*Others (oil seeds.)*—Castor oil seeds, inferior sessamum (hutchellu), groundnut or nelakadalekayi, honge, ippe, etc.

Column 17.—*Condiments and spices.*—Pepper, cardamom, chillies, cummin seeds, coriander seeds, ginger, mustards, turmeric, onions, garlic, mentya, etc.

Column 22.—*Others (Fibres).*—Pundi, sanabu, etc.

Column 27.—*Others (Dyes).*—Rangumale, etc.

Column 29.—*Coffee* should be both malnad and maidan. The area covered by both mature and immature plants should be entered.

Column 36.—*Fodder crops.*—Kaki jola, etc.

Column 37.—*Orchards and garden produce.*—Mango, apples, figs, plantains, oranges, pomegranates, etc. The area of cocoanut, areca and betel-leaf gardens should also be included.

Column 38.—*Miscellaneous food crops.*—Vegetable gardens, potatoes, etc.

Column 39.—*Miscellaneous non-food crops.*—Mulberry, etc.

6. *Table A-4.*—This table deals with agricultural stock and should include live-stock in Municipalities. Oxen and buffaloes not old enough for work or to produce young should be treated as "Young stock" in this return.

Until 1898-99, statistics of live-stock were collected every year by the shanbhog and patel of each village by inquiry and inspection, as a part of the year's jamabandi routine. Government directed, in their Order No. 7601—615, dated 24th April 1899, a quinquennial census to be taken and the repetition of the figures of such census as statistics for the ensuing four years. Consequently the figures contained in the statement for the two years 1904-05 and 1905-06 are those obtained at the Census of September 1904.

7. *Table B.*—This is a statement showing the average for the year of the prices current of certain articles. It is printed in this collection, as Part III.

8. *Table C.*—This table indicates the relation between area, population and land revenue or in other words the mean burden of the State assessment on the land assessed to it and on the community at large. The tenure to which this table (for the Mysore State) relates is entirely raiyatwari.

(*a*) Column 3 (*a*) represents the area of alienated villages, plus the area of unoccupied assessed waste land in Sirkar villages (4 of Table A-2). The area of minor Inams is not however included in this column, as a proportionate deduction cannot be made in the corresponding population.

(*b*) Column 3 (*b*) represents the area withdrawn from cultivation and should therefore exhibit the total of the areas shown in columns 2 and 3 of Table A-2

(*c*) Column 4 (*a*) exhibits the area of occupied lands (Sirkar and minor Inam) in Government villages and should therefore equal the sum total of the figures in column 5 and column 6 of Table A-2 (current fallows and net area cropped during the year).

(*d*) Column 4 (*b*) exhibits the area actually cultivated. The figure under column 6 of Table A-2 will therefore be repeated here.

(*e*) Column 5 should exhibit the total realizable Land Revenue including Miscellaneous Land Revenue of the whole district for the year after excluding arrears for past years. The figure to be entered here will therefore be that which represents the fixed demand under these heads *plus* Miscellaneous Land Revenue and *minus* remissions under defined rules, and *minus* also irrigation cess merged in the assessment as shown in the list appended to Government Proceedings No. R. 212, dated 30th July 1894.

(*f*) Columns 6 and 11.—The population according to the most recent decennial census will be entered in column 6 subject to such alterations as are necessitated by any change in the constitution of the districts and the figures in column 11 are subject to such alteration as may be necessitated by alteration in the area of "fully assessed land" by the resumption of alienated villages or other causes.

(*g*) Column 7 is arrived at by column 5 being divided by column 6.

(*h*) Column 8 does not include Miscellaneous Land Revenue and Land Revenue on alienated villages which are included in column 5.

(*i*) Column 9 is arrived at by column 8 being divided by column 4 (*a*).

Column 10 is arrived at by column 8 being divided by column 4 (*b*).

Column 12 is arrived at by column 8 being divided by column 11.

9. *Table D.*—The form prescribed by the Government of India is intended to show the principal varieties of tenure held direct from Government. For Mysore (where the prevailing tenure is raiyatwari and the accounts are kept villagevar), the first four classes and classes VII and VIII will be left blank, all raiyatwari holdings will be included in class V, the heading thereof being altered from "Peasant proprietors paying separately" to "Small holdings held separate and direct from Government (raiyatwari tenure)" and all Inams (Jahgirs, whole Inam and Kayamgutta villages and minor Inams in Sirkar villages) will be entered in class VI. Lease-holders of gold mines will be shown under class IX "others."

(*a*) (1), Number of estates.—This represents practically the number of separate pattas issued or khates recorded in the Land Revenue Register. Two or more estates belonging to the same proprietor, if they are separately recorded in the Revenue Ledgers and form the subjects of separate pattas, will be separately reckoned for this return.

(*b*) (2), Number of villages.—This shows the total number of villages (primary, of course) populated and unpopulated, *i. e.*, the areas constituted as villages by the Survey and Settlement Department.

(*c*) (3), Number of holders.—One proprietor may be reckoned twice or oftener as the owner of two or more estates separately recorded according to the number of pattas held by him.

(*d*) Item 5½. Gross assessment.—Between items 5 and 6 of the Government of India form, an item numbered 5½ should be opened to show "gross assessment." This in the case of raiyatwari lands will be the survey assessment and water-tax, and in the case of alienated lands it will be combined quit-rent and water-rate (if any) payable to Government : in both cases without deducting remissions and other deductions, if any.

10. (*a*) *Table E.*—This table is intended to show the number of voluntary and compulsory transfers of ownerships of lands and the area so transferred. By "voluntary transfers" are meant transfers made by actual contract or gift. Transfers by inheritance are not to be taken into account, nor non-permanent transfers such as leases, mortgages, etc. Only permanent transfers (for instance by sale or gift) should be included when the parties concerned apply for and obtain transfer of "Revenue Registry." These voluntary transfers will be entered in columns 4 and 5 and columns 8 and 9 (private contract or gift). On the other hand under heading "By order of Court," columns 2 and 3 and columns 6 and 7 are included :—

(1) Changes of registry under decrees of Civil and Revenue Courts whether the decrees were passed on disputes regarding title or by reason of debts incurred by the judgment-debtors, and

(2) All cases in which lands are sold for arrears of revenue due to Government and purchased by private parties.

(*b*) Cases in which lands sold for arrears of revenue due to Government are bought by Government will be excluded from this table.

The particulars contained in columns 2 to 21 should be entered for each district opposite to details under column 1 "Class of tenure," *viz.*, (*a*) Revenue paying and (*b*) wholly or partially revenue free.

The information contained in Table E will be entirely based upon that *furnished for each village* in Village Account Form No. 6 (Statement of Increase and Decrease) and its enclosure.

On this marvellously situated spot covering, as it does, more than 200 acres, halls and pavilions will be erected, ready to accommodate productions from all over the world.

Broad tree-set avenues will connect the Avenue Louise with the entrance of the Exhibition, while tramway lines will ensure communication with all the suburban districts of the City.

How delightful it will be for the visitors, after spending the greater part of the day in thoroughly going over the galleries, to be able to enjoy from the terraces, in the cool of fine summer evenings, the glorious scenery of the sunset lighting up in crimson the beautiful foliage of the grand trees of the forest—a magnificent frame encircling the vast arena where the workers of the whole world will soon gather to wrestle with each other in a courteous and peaceful manner.

The Exhibition grounds will be connected with the Belgian State Railways.

The Principal Palace as well as the Halls of the Exhibition will be built of iron and covered with hard materials; the Palace will be surrounded by a *vast Park* containing numerous attractions.

Adopting the idea suggested by the magnificent displays witnessed at Turin and Milan, the organisers contemplate the creation of an international section of *Modern Decorative Art.*

The *Machinery Hall* will have, annexed to it, a working gallery where numerous workshops will continually be in operation under the eyes of the public. Special attention will be paid to the installation of a compartment of *small tools* and of motors for performing *work at home*.

A special Palace may be reserved for *Retrospective and Modern Exhibitions of Lighting appliances* of every description.

As was done at the Liege Exhibition in 1905, *Female Arts and Industries* will be the subject of a special organisation.

With the view of giving effect to the resolutions adopted at the Congress of the World's Expansion held at Mons in 1905, the Executive Committee will make it a point of arranging Groups in connection with Trade and Colonisation.

The programme will also include special exhibitions, *temporary Agricultural and Horticultural Shows, Congresses, Conferences, Artistic Fetes* and *Competitions* of all kinds, so as to afford visitors every possible *attraction.*

Further, the Executive Committee will give their patronage to the formation of a *Commercial Bureau* on the premises, which besides affording the exhibitor a means of protection of his interests at the Exhibition, will at the same time be a source of diffusion of his industry.

The *Commercial Bureau* will centralise all information concerning the industries represented; it will place Engineers at the disposal of such visitors as may wish to be guided over the Exhibition and it will endeavour, in every possible way, to promote the development of commercial intercourse between the countries gathered together at this World's Fair.

The necessary measures will be taken for *protecting* in Belgium patentable *inventions*, industrial designs or models, and manufacturing or trade marks appearing at the Exhibition.

The Government will grant on the State Railways *free transport* of *Belgium products* returning from the Exhibition.

The Exhibition will be treated as an *actual bonded warehouse*, foreign goods consigned to the Exhibition being allowed provisional *duty-free importation*, subject to being afterwards re-exported.

The general Regulations, the classification of exhibits and conditions of admission will very shortly be settled; a plan has already been adopted consisting in dividing the goods according to National Compartment, *viz.*, grouping together the works and productions of each country combined with a system of general classification.

The price for space will include the expenses of general decoration and handling charges; exhibitors will thus be enabled to ascertain beforehand the exact outlay incumbent upon them.

A *Lottery* will be organised under the authority and supervision of the Government; the prizes will be purchased from amongst the exhibits.

An *International Jury*, appointed with the approbation of the Government, will undertake the allotment of awards.

The *Belgian Government* have appointed a Commissioner General to act as their Delegate to the Executive Committee of the Exhibition and Foreign Sections, and a Commission will shortly be instituted for the purpose of inducing Belgian producers to concur, and of furthering their participation.

The Exhibition is placed under the *High Patronage of His Majesty the King of the Belgians and the Honorary Presidency of H. R. H. Prince Albert of Belgium.*

It has already secured the effective co-operation of the Belgian Government as well as the support of the City of Brussels.

The profits realised by the undertaking are to be applied to the organisation of *Fetes* and *Rejoicings* of an attractive character so as to draw people to the Exhibition and to the Capital, and the surplus, if any, will be devoted to a *Fund of Public Utility.*

The chief object of the organisers is to promote and develop international dealings, namely to extend outlets for *Industry*, to open up broader fields of action for *Trade*, and moreover to increase and multiply the *commercial relations* between all Nations.

The Executive Committee therefore warmly appeal to every Nation of the Globe, in the hope that all countries will direct their combined efforts towards collecting at Brussels a large and choice selection of exhibits, in evidence of the importance attached to the pursuit of progress in every branch of human activity.

ORDERED that the foregoing papers be published in the Supplement to the *Gazette of India*, for general information, and that copies be forwarded to the Local Governments and Administrations named in the margin, for information.

The Government of Madras.
Do Bombay.
Do Bengal.
Do the United Provinces.
Do the Punjab.
Do Burma
Do Eastern Bengal and Assam.
The Hon'ble the Chief Commissioner, Central Provinces.
The Chief Commissioner of Coorg.

Ordered, also, that a copy be forwarded to the Chief Commissioner of Ajmer-Merwara, and the Honourable the Agent to the Governor-General and Chief Commissioner, North-West Frontier Province, for information, and to the Forgein Department, for information and communication to Native States.

Ordered, also, that a copy be forwarded to all Chambers of Commerce, for information.

W. L. HARVEY,
Secy. to the Govt. of India.

Proceedings of the Government of His Highness the Maharaja of Mysore.

READ—

Government Proceedings No. G. 2070-107—G. F. 142 of 03-4, dated the 13th October 1904, directing that Acts, Regulations, Rules and other matters published in the official Gazette, Departmental and State Administration Reports, be made available for sale to the public.

2. Government Proceedings No. G. 5078-9—G. M. 100-06-11, dated 9th February 1907, issuing further instructions in regard to the sale of official publications to the public, and directing that such publications be priced in accordance with the scale prescribed in the Government Proceedings referred to above.

No. G. 4320-61—G. M. 174-07-4, dated Bangalore, 24th January 1908.

ORDER THEREON.—Government are pleased to direct that, in addition to the official publications mentioned above, all orders placed at the disposal of the Press be made available for sale to the public. The Superintendent of the Government Press and Compiler of the *Mysore Gazette*, will see that, as soon as the list of papers placed at the disposal of the Press is sent for publication in Gazette, the orders included therein are priced according to the rates prescribed in the Government Order of the 13th October 1904 and that the list is notified in the Gazette with the price noted against each order.

2. Government further direct that important orders of general interest be translated into Kanarese and printed in the *Mysore Gazette* and that copies thereof be made available for sale to the public at prices fixed as above. The Secretaries in the several Departments will indicate when orders are decided to be placed at the disposal of the Press, what orders should be translated into Kanarese and take steps to have the same translated and printed.

3. The Superintendent of the Government Press will be informed when orders are sent to him to be printed how many printed copies of each are required. The other Secretariats are requested to send without delay to the General and Revenue Secretariat a duly certified copy of every order placed at the disposal of the Press, so as to facilitate the timely preparation of the list of such papers for publication in the Gazette, translations of such of the orders as are selected for translation being sent direct to the Compiler of the Gazette for publication.

4. As in the case of other official publications, the sale of these orders shall be entrusted to the Curator, Government Central Book Depot. He will include the financial result of the arrangements ordered in paras 1 and 2 above in the report he has to submit to Government under para 1 of Government Proceedings No. G. 5078—G. M. 100-06-11, dated the 9th February 1907.

C. S. BALASUNDARAM IYER,
Offg. Secy. to Govt., Gen. & Rev. Depts.

PART II.

OUT-TURN OF CERTAIN SELECTED CROPS.

TABLE OF CONTENTS.

	Pages.
Explanatory Memorandum—	
Area and estimated yield :—	
Paddy	1-8
Ragi	9-16.
Horse-gram	17-24
Cholam	25-32
Sugar-cane	33-40

190

EXPLANATORY MEMORANDUM ON THE STATISTICS RELATING TO AREA AND YIELD OF PRINCIPAL CROPS.

The Estimates of out-turn of crops comprised in the following pages are based upon the village Account Form No. 3 (Pahani Thaktha).

2. In this account, the area, assessment and other particulars of each field are entered from the permanent village accounts; and for each Survey number, the estimated area under each crop is entered by actual field inspection every year. The inspection is to be made twice in the year to correspond with cultivation and crop time. An abstract is subjoined to the account showing the aggregate estimated area uuder each of the fifteen principal crops enumerated in the prescribed form.

3. In 1897, the opportunity was taken to utilize this account for estimating the year's yield of the harvest under each of five selected crops *viz.*, paddy, ragi, horse-gram, cholam and sugar-cane. It was ordered that this estimate should be made by tabulating the area under each crop in the village, in a form which was prescribed as an "Enclosure to the Pahani Thaktha, Village Account Form No. 3." It was directed that as a rule, that is to say, except when the Deputy Commissioner would otherwise direct under section 10 (a) of the Mysore Famine Code, the return should correspond with the two pahani inspections, *viz.*, once before the jamabandy about the second fort-night of October while the crops are standing, and a second time after the cultivation season is over at the end of January following. Under these orders, the return is, in the first instance, prepared for each village by its shanbhog and submitted to the Taluk Office where after being examined, it is compiled for the entire taluk and trasmitted to the Deputy Commissioner who, in his turn, submits to this office an abstract statement Taluk-var for his District before the end of April every year.

4. The out-turn is estimated for each village taken separately by the shanbhog and Patel who, from their intimate knowledge of the locality, may be relied upon to judge in this matter as well as possible for the purposes of a rough approximate estimate.

5. The out-turn is stated in annas, *viz.*, 20 annas,' '16 annas,' '8 annas' and '4 annas and less' which would respectively represent 'bumper,' 'average,' 'middling,' and 'bad harvests.'

6. The aggregate estimated area under each crop as per Pahani abstract is distributed under these four classes, and arithmetically reduced to the equivalent area under a normal, that is to say, a fair average or 16 anna crop. The standard actual yield of a normal crop per acre (16 annas) in a fairly good season is fixed for the taluk as a whole, after careful local inquiry once for all, and not afterwards altered without the previous sanction of Government. The estimated out-turn for the entire taluk is calculated on this basis, and the results for the years 1904-05 and 1905-06 are exhibited in the following pages.

[For full details of the method, see the following standing orders on the subject:—

(1) Government Proceedings No. 6150—R. 2096, dated 9th January 1897.

(2) Government Proceedings No. 7866—R. F. 130-93, dated 10th March 1897.

(3) Government Proceedings No. 5713—R. F. 130-93, dated 21st February 1899.]

Statement showing the estimated out-turn of certain selected crops during the years 1904-05 and 1905-06 in Taluks and Districts of the Mysore State.

EXPLANATORY MEMORANDUM.

1. Though this is a compilation from the Prices Current returns relating to thirteen kinds of marginally noted food-stuffs, the publication is confined to the six principal articles of food, *viz.*, rice, first sort, rice, second sort, ragi, cholam, Bengal gram or chenna and salt.

1 Wheat.
2 Barley.
3 Rice, best sort.
4 Rice, common.
5 Javar or cholam.
6 Bajra or kambu.
7 Ragi.
8 Italian millet.
9 Bengal gram.
10 Maize.
11 Arhar or Thurcadjou pea.
12 Arhar dal.
13 Salt.

2. The prices given herein relate to retail prices and are based upon the returns furnished every fortnight by Deputy Commissioners as being the prices which prevailed in the several District head-quarters.

3. The prices quoted are expressed in seers and decimals of a seer (the standard seer of 80 tolas per rupee).

Retail Prices of 6 Principal Articles of Food.

BANGALORE — RICE, 1ST SORT.

Quantity (seers and decimals) per rupee by the standard seer of 80 Tolas.

Kadale—(Bengal gram) Ciser Arietinum.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7¾	6 to 6½	seers per rupee.
Ragi ...	20	11 to 12	

Agricultural operations.—Ragi thrashing.

Cattle are in good condition. Water sufficient. Fodder is growing dear.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—Harvesting of ragi in the Hoskote, Kankanhalli, Channapatna and Closepet Taluks, and milling of sugar-cane in the Kankanhalli Taluk, continue.

Standing crops.—Potatoe and paddy seedlings in Hoskote, and sugar-cane in almost all the taluks are reported to be in fair condition.

Prospects and probable outturn of crops:—

Ragi ...	Yield from	8 to 12 annas	in Hoskote Taluk.
„ ...	„	4 to 8 „	in Nelamangala Taluk.
„ ...	„	4 to 6 „	in Devanhalli Taluk.
Paddy ...	„	6 to 12 „	in Hoskote Taluk.
„ ...	„	4 to 8 „	in Nelamangala Taluk.
„ ...	„	Yield 6 „	in Devanhalli Taluk.
Horse gram ...	„	12 to 14 „	in Hoskote Taluk.
„ ...	„	4 to 8 „	in Nelamangala Taluk.
„ ...	„	Yield 6 „	in Devanhalli Taluk.
Sugar-cane ...	„	4 to 12 „	in Hoskote Taluk.
„ ...		Yield 10 „	in Channapatna Taluk.
„ ...		„ 14 „	in Devanhalli Taluk.

10. Prospects of the season generally fair. Stock of food stuffs sufficient. There is no apprehension of distress anywhere at present.

11. Public health generally good. But plague is still prevalant in the towns of Channapatna and Devanhalli and also in some of the villages of the Hoskote, Dodballapur, Nelamangala, Kankanhalli, Anekal and Devanhalli Taluks.

12. Cattle healthy, but "Doddaroga" is reported to be prevalent among cattle in some of the hoblis of the Dodballapur and Channapatna Taluks. Water and fodder available.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Standing crops are reported to be in good condition.

Crops sown.—Vaisakhi paddy in Sidlaghatta and Srinivaspur; and sugar-cane in Chintamani and Gudibanda.

Crops harvested.—Karthika paddy in Bowringpet; horse gram and avare in Kolar, Malur and Srinivaspur; avare in Sidlaghatta; and sugar-cane in almost all the taluks of the district, except Malur and Srinivaspur.

10. Prospects of the season generally good. Food stuffs available.

11. Except for the prevalence of plague in the Kolar Gold Fields and in the Mulbagal, Sidlaghatta, Chintamani and Goribidnur Taluks and small-pox in parts of Srinivaspur, public health generally good.

12. Cattle generally healthy, but "Sappe roga" prevails in Mittahalli, Chilakalnerpu hobli, Sidlaghatta Taluk, and "Rinderpest" in parts of the Chikballapur Taluk and the Gudibanda Sub-Taluk. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are in moderately good condition.

Crops sown.—Paddy in Maddagiri, Sira, Gubbi and Pavagada; sugar-cane in Maddagiri; and cholum in Sira.

Crops harvested.—Sugar-cane in Tumkur, Maddagiri, Koratagere and Turuvekere; Bengal gram in Chiknayakanhalli, Sira and Gubbi; cholam in Sira; and horse gram, castor and cotton in Pavagada.

10. Prospects of the season moderate.

11. Except for plague in the towns of Tumkur and Gubbi, and ague in Tiptur, public health good.

12. Except in parts of the Maddagiri, Chiknayakanhalli and Pavagada Taluks, cattle healthy in all other parts. Water and fodder available for the present. Date leaves are being used as fodder in certain places in the Sira Taluk.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Seringapatam, Gundlupet and Mandya Taluks are being ploughed.

Standing crops are reported to be in good condition in all the taluks.

Crop sown.—Kar paddy is being sown in some villages of the Yedatore Taluk.

Crops harvested.—Paddy and ragi in parts of the Nagamangala Taluk; avare in parts of the Heggaddevankote Taluk; sugar-cane in parts of the T.-Narsipur Taluk; horse gram in parts of the T.-Narsipur and Nagamangala Taluks; and Bengal gram in parts of the Heggaddevankote, T.-Narsipur and Nagamangala Taluks; these are being harvested.

Probable outturn of crops :—

Malvalli—Samè, paddy, horse gram and ragi ... ... Yield 8 annas each.
Krishnarajpete—Bengal gram ... ... „ 10 „

10. Prospects of the season good. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Mysore, Hunsur, Chamrajnagar, Gundlupet, Nanjangud and T.-Narsipur Taluks, public health generally good.

12. Cattle are reported to be healthy in all the taluks, except in the Kasaba Hobli, of the T.-Narsipur Taluk, where they are reported to be suffering from "Foot and Mouth" disease. Water and fodder available throughout.

HASSAN

8. Market well supplied.

9. *Standing crops., viz.*, sugar-cane, onions, gingelly, etc., are reported to be in good condition.

Crops sown.—Sugar-cane is being sown in the Channarayapatna Taluk.

Crops harvested.—Bengal gram in the Channarayapatna, Arsikere and Arkalgud Taluks; horse gram and avare in the Arsikere Taluk; and sugar-cane in the Channarayapatna Taluk; these are being harvested.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks, public health generally good.

12. Cattle generally healthy. The disease among cattle in parts of the Arsikere Taluk has subsided; that in the Belur Taluk, it is declining; and that it still continues in parts of the Hassan Taluk; and the affected cattle are being treated as per instructions of the Inspector of Cattle Diseases. Water and fodder available.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Lands in portions of the Shimoga Taluk are being ploughed.

Standing crops, viz., Bengal gram, green gram, black gram, horse gram and sugar-cane, are in good condition.

Crop sown.—Vaisakhi paddy is being sown in portions of the Sagar Taluk.

Crops harvested.—Sugar-cane is being milled in portions of the Shimoga, Channagiri, Shikarpur, Nagar and Tirthahalli Taluks. Bengal gram is being harvested in the Honnali Taluk.

Probable outturn of crops :—

Paddy	...	Yield from 8 to 12 annas		in Channagiri.
„	...	Yield 12	„	in Shikarpur.
„	...	„ 15½	„	in Sagar.
„	...	„ 12	„	in Nagar.
Arecanut	...	„ 14	„	do
„	...	„ 14½	„	in Sagar.
Sugar-cane	...	„ 12	„	in Shikarpur.
„	...	„ 4	„	in Nagar.
„	...	„ 6	„	in the Kumsi Sub-Taluk.
Ragi	...	Yield from 8 to 12	„	in Channagiri.
Cholum	...	„ „	„	do
Bengal gram	...	„ 2 to 6	„	do
Yennigar cholum	...	Yield 4	„	do
Cotton	...	„ 8	„	do

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Public health generally good. But plague continues in portions of the Shimoga Taluk, the Kumsi Sub-Taluk and Tirthahalli Town. Channagiri Town and some villages in the Shikarpur Taluk have become infected.

12. Cattle healthy, except in portions of the Nagar Taluk, where Murrain prevails. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Ploughing in the Chikmagalur and Mudgere Taluks and manuring bagayat lands in the Koppa Taluk are going on.

Standing crops:—

In Chikmagalur—Sugar-cane, coffee, kode paddy, Bengal gram, wheat, horse gram, fenugreek, gingelly, avare and togari.
In Kadur—Bengal gram, wheat, cholum and sugar-cane.
In Tarikere—Sugar-cane and Bengal gram.
In Koppa—Pepper, sugar-cane, coffee and areca.
In Mudgere—Areca and coffee.
In Yedahalli—Areca, and sugar-cane.
In Sringeri—Nil.

All the above are reported to be in good condition.

Crops harvested and their yield:—

Chikmagalur—Coffee	...	Yield 12 annas.
Sugar-cane	...	„ 8 „
Avare	...	„ 8 „
Togari	...	„ 6 „
Horse gram and Bengal gram	...	„ 10 „
Kadur—Bengal gram	...	„ 8 „
Wheat	...	„ 4 „
Sugar-cane	...	„ 10 „
Tarikere—Paddy	...	„ 8 „
Ragi	...	„ 8 „
Cholum	...	„ 12 „
Avare and horse gram	...	„ 10 „
Bengal gram	...	„ 8 „
Koppa—Coffee	...	„ 15 „
Areca	...	„ 16 „
Paddy	...	„ 16 „
Mudgere—Coffee	...	„ 12 „
Paddy	...	„ 12 „
Ragi	...	„ 8 „
Areca	...	„ 8 „
Yedahalli—Sugar-cane and areca	...	„ 12 „
Sringeri—Paddy	...	„ 14 „
Areca	...	„ 12 „

10. Prospects of the season good. Food stuffs sufficient. Paddy is being largely exported from Chikmagalur to Bombay and other parts.

11. Except for plague in the towns of Birur, Sakrepatna, Tarikere and Mudgere, and in the villages of Togur and Amble in the Chikmagalur Taluk, public health generally good.

12. Cattle generally healthy. "Dodda Roga" is reported to be subsiding in all the taluks. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops* are reported to be in fair condition.

Crop sown.—Nil.

Crops harvested and their yield.—White cholum, sugar-cane, cotton, castor and Bengal gram in the Chitaldrug, Challakere, Davangere, Holalkere and Hiriyur Taluks and the Harihar Sub-Taluk, yield from 4 to 12 annas. Wheat and chillies in the Hiriyur Taluk, yield from 2 to 4 annas. Horse gram in the Challakere and Hiriyur Taluks, yield from 2 to 6 annas.

10. Prospects of the season fair. Food stuffs available.

11. Except for a few cases of plague in some parts of the Davangere and Jagalur Taluks, public health generally good.

12. Cattle healthy. Water and fodder available.

DISTRICT REPORTS.

Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock; failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7½	6 to 6½	seers per rupee.
Ragi ...	20½	11 to 12	

Agricultural operations.—Ragi thrashing.

Cattle are in good condition. Water sufficient. Fodder is growing very dear.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—In the Nelamangala and Devanhalli Taluks, raiyats are engaged in preparing their fields for planting them with sugar-cane.

Standing crops.—Potato in Hoskote and sugar-cane in almost all the taluks are reported to be in good condition. Paddy crop, except under large tanks in the Nelamangala Taluk, is withering.

Crop sown.—Paddy is being grown under the large tanks in the Hoskote Taluk.

Crops harvested.—Harvesting of ragi in the Hoskote, Kankanhalli, Magadi, Channapatna, Anekal and Devanhalli Taluks, and milling of sugar-cane in Devanhalli, are being continued.

Probable outturn of crops:—

Ragi ...	Yield from 4 to 8	annas in Nelamangala Taluk.
„ ...	„ 8 to 12	„ in Hoskote Taluk.
„ ...	„ 4 to 8	„ in Devanhalli Taluk.
Paddy ...	„ 6 to 12	„ in Hoskote Taluk.
„ ...	„ 4 to 8	„ in Nelamangala Taluk.
Horse gram ...	„ 12 to 14	„ in Hoskote Taluk.
„ ...	Yield 6	„ in Devanhalli Taluk.
„ ...	„ 4 to 8	„ in Nelamangala Taluk.
Sugar-cane ...	„ 12 to 14	„ Do

10. Prospects of the season generally good. Want of water is beginning to be felt in some of the villages of the Kankanhalli Taluk, but there is no apprehension of distress anywhere.

11. Except for plague, which is still prevailing in the town of Devanhalli and also in some villages of the Hoskote, Dodballapur, Nelamangala, Kankanhalli, Anekal and Devanhalli Taluks, and subsiding in the town of Channapatna, public health generally fair.

12. Cattle healthy, but "Doddaroga" in Kolur and other villages of the Dodballapur Taluk and in the Malur hobli of the Channapatna Taluk; "Sappe roga" in Aralal and "Garasalu roga" in Salbanni, Hosdurga and other villages of Kankanhalli, are reported to be prevalent. Water and fodder are available in all the taluks except in Kankanhalli, where water-supply is reported to be insufficient. Detailed report has been called for in the matter.

N.B.—Report not received from the Closepet Sub-Taluk.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Standing crops are reported to be in good condition.

Crops sown.—Vaisakhi paddy in Sidlaghatta, Malur and Srinivaspur; and sugar-cane in Chintamani, Chikballapur, Bagepalli and Gudibanda.

Crops harvested.—Paddy in Bowringpet; horse gram and avare in Kolar, Malur and Srinivaspur; horse gram in Bowringpet; avare in Sidlaghatta; and sugar-cane in all the taluks of the district, except Srinivaspur.

10. Prospects of the season generally good. Food stuffs available.

11. Except for the prevalence of plague in a few villages of the Bowringpet, Kolar and Goribidnur Taluks and in the towns of Mulbagal and Sidlaghatta and small-pox in parts of Srinivaspur, public health generally good.

12. Cattle generally healthy. But "Rinder pest" prevails in Manchanabale and Mustur villages of the Chikballapur Taluk and in parts of Gudibanda and Gorib Inur. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are in moderately good condition.

Crops sown.—Paddy in Maddagiri, Gubbi and Koratgere; and sugar-cane in Gubbi.

Crops harvested.—Sugar-cane in Maddagiri, Tumkur, Koratagere and Turuvekere; Bengal gram in Maddagiri, Koratagere and Turuvekere; cholum in Sira and Gubbi; paddy in Gubbi and Turuvekere; and castor, horse gram and cotton in Pavagada.

10. Prospects of the season moderate.

11. Except for plague in the towns of Tumkur and Gubbi, ague in Tiptur and small-pox in Parthihalli, Maddagiri Taluk, public health good.

12. Except in parts of the Chiknayakanhalli and Pavagada Taluks, cattle healthy in all the other parts. Water and fodder available for the present.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Seringapatam and Gundlupet Taluks are being ploughed. Paddy, horse gram and ragi are being thrashed in parts of the Malvalli Taluk.

Standing crops are reported to be in good condition in all the taluks.

Crop sown.—Kar paddy is being sown in some villages of the Yedatore Taluk.

Crops harvested.—Horse gram and Bengal gram in parts of the T.-Narsipur and Nagamangala Taluks; sugar-cane in parts of the T.-Narsipur Taluk; and paddy and ragi in parts of the Nagamangala Taluk; these are being harvested.

Probable outturn of crops :—

Malvalli Taluk—Samè, paddy, horse-gram and ragi ... Yield 8 annas each.
Krishnarajpete—Bengal gram ... ... „ 10 „

10. Prospects of the season good. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Hunsur, Gundlupet, Nanjangud and T.-Narsipur Taluks, public health generally good.

12. Cattle are reported to be healthy in all the taluks, except in the village of Thayur in the Nanjangud Taluk and in some villages of the Bannur hobli, T.-Narsipur Taluk, where they are reported to be suffering from "Foot and mouth" disease. Water and fodder available throughout.

HASSAN.

8. Market well supplied.

9. *Standing crops., viz.*, sugar-cane, onions, garlic, castor, etc., are reported to be in good condition.

Crops sown.—Sugar-cane is being sown in the Channarayapatna Taluk.

Crops harvested.—Bengal gram in the Arsikere, Arkalgud and Channarayapatna Taluks; and sugar-cane in the Channarayapatna Taluk; these are being harvested.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks, public health generally good.

12. Cattle generally healthy. But they are still suffering from disease in parts of the Belur, Arsikere and Hassan Taluks. The Inspector of Cattle Diseases has been informed of this and the affected cattle, in the meanwhile, are being treated as per his instructions.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Lands are being ploughed in portions of the Shimoga Taluk.

Crops sown.—Sugar-cane is being planted in portions of the Shimoga and Shikarpur Taluks and the Kumsi Sub-Taluk; and Vaisakhi paddy is being sown in the Sagar Taluk.

Crops harvested.—Sugar-cane is being milled in portions of the Shimoga, Shikarpur, Nagar and Tirthahalli Taluks and the Kumsi Sub-Taluk; and Bengal gram is being harvested in the Channagiri and Honnali Taluks.

Probable outturn of crops :—

Paddy ...	Yield from 8 to 12 annas		in the Channagiri Taluk.
Ragi ...	„	„	do
Cholum ...	„	„	do
Bengal gram ...	„ 2 to 6	„	do
Sugar-cane ...	Yield 10	„	in the Shikarpur Taluk.
Bengal-gram ...	„ 4	„	in the Honnali Taluk.
Sugar-cane ...	„ 8	„	in the Kumsi Sub-Taluk.
Paddy ...	„ 15½	„	in the Sagar Taluk.
Arecanut ...	„ 14½	„	do
Paddy ...	„ 12	„	in the Nagar Taluk.
Sugar-cane ...	„ 8	„	do
Arecanut ...	„ 6	„	do

10. Prospects of the season generally good. Food stuffs available in sufficient quantities.

11. Public health generally good. But plague continues in a few villages of the Shimoga, Channagiri and Shikarpur Taluks and the Kumsi Sub-Taluk.

12. Cattle generally healthy. But murrain continues in a few villages of the Shimoga Taluk. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Ploughing in Chikmagalur, Mudgere and Sringeri and manuring of bagayat lands in the Koppa Taluk are going on.

Standing crops:—

In Chikmagalur—Sugar-cane, coffee, wheat, Bengal gram, fenugreek, gingelly, horse gram, kar paddy, avare and togari.

In Kadur—Bengal gram, cholum, cotton, castor, sugar-cane and wheat.

In Tarikere—Bengal gram and sugar-cane.

In Koppa—Pepper, sugar-cane and areca.

In Mudgere—Areca and coffee.

In Yedahalli—Areca and sugar-cane.

In Sringeri—Nil.

All the above are reported to be in good condition.

Crops harvested and their yield:—

Chikmagalur—Coffee	...	Yield	12 annas.
Horse gram and Bengal gram	...	„	10 „
Sugar-cane and avare	...	„	8 „
Togari	...	„	6 „
Kadur—Bengal gram and cotton	...	„	8 „
Sugar-cane	...	„	10 „
Wheat	...	„	4 „
Castor	...	„	6 „
Tarikere—Paddy and ragi	...	„	8 „
Cholum	...	„	12 „
Horse gram	...	„	10 „
Bengal gram	...	„	8 „
Koppa—Areca and paddy	...	„	16 „
Mudgere—Areca	...	„	8 „
Coffee	...	„	12 „
Yedahalli—Sugar-cane and areca	...	„	12 „
Sringeri—Paddy	...	„	14 „
Areca	...	„	12 „

10. Prospects of the season good. Food stuffs sufficient. Paddy is being largely exported from Chikmagalur to Bangalore and other parts.

11. Except for plague in certain places in the Tarikere, Kadur, Mudgere and Chikmagalur Taluks, public health generally good.

12. Cattle generally healthy. "Dodda roga" is reported to be subsiding in all the taluks except the Mudgere Taluk, where it is continuing in Anajur and other villages. "Foot and mouth" disease has broken out in Kalasa hobli and it is reported that proper steps have been taken to check its spread. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops, viz.*—Sugar-cane, paddy, castor, cotton and Bengal gram are reported to be in fair condition.

Crop sown.—Nil.

Crops harvested and their yield.—Sugar-cane, castor and cotton in the Chitaldrug, Holalkere and Davangere Taluks, yield from 4 to 8 annas. White cholum in the Hiriyur Taluk and the Harihar Sub-Taluk yield 8 annas. Paddy in the Chitaldrug Taluk, yield from 4 to 8 annas; and Bengal gram in the Holalkere and Davangere Taluks, yield 8 annas.

10. Prospects of the season fair. Food stuffs available.

11. Except for plague in some parts of the Davangere Taluk, public health generally good.

12. Cattle healthy. Water and fodder available.

BANGALORE,
26th February 1908.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

Notification No. R. 5442—*Agri.* 87-07-2, *dated* 24*th February* 1908.

The following Proclamation issued by the Governor of Jamaica, revoking the Proclamation of December 1887 under which the importation of seeds, plants, etc., into the Island of Jamaica was prohibited (published in Part I of the *Mysore Gazette* dated 14th April 1888) and prescribing the conditions under which such importation is now allowed, is published for general information :—

By Order,
C. S. BALASUNDARAM IYER,
Offg. Secy. to Govt., Gen. & Rev. Depts

By His Excellency Sir Sydney Oliver, Bachelor of Arts, Knight Commander of the Most Distinguished Order of Saint Michael and Saint George, Captain-General and Governor-in-Chief in and over the Island of Jamaica and its Dependencies.

A. PROCLAMATION.

WHEREAS it is enacted by the First Section of Law 4 of 1884, "The Seed and Plants Importation Law, 1884," that it shall be lawful for the Governor to revoke or vary any Proclamation made by him under that section ;

AND WHEREAS General Sir Henry Wylie Norman, G.C.B., G.C.M.G., C.I.E., Captain-General and Governor-in-Chief in and over the Island of Jamaica and its Dependencies ; by Proclamation made on the 2nd day of December 1887, prohibited until further Proclamation the imporation into the Island of seeds or plants or any description of earth or soil or any article packed therewith that may have come either directly or indirectly from any of the following countries, *viz.*, Natal, South India, Ceylon, Mauritius, Java and Fiji.

Now, therefore, I, the Governor, do hereby revoke the aforementioned Proclamation bearing date the 2nd day of December 1887 and I hereby proclaim that I prescribe the following conditions as conditions under which alone the importation of any of the articles aforesaid shall be permitted that may have come either directly or indirectly from any of the countries aforesaid, *viz.*, that all such articles (including seeds) imported from the aforementioned countries shall be fumigated in accordance with the Instructions published in the *Jamaica Gazette* of the 9th January 1902.

Given under my hand and the Broad Seal of this Island at Head-quarters House, Kingston, on the eleventh day of December in the seventh year of His Majesty's Reign Annoque Domini, 1907.

By Command,
H. CLARENCE BOURNE,
Colonial Secretary.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11 Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

		Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice	...	7½	6 to 6½	seers per rupee.
Ragi	...	20½	11 to 12	

Agricultural operations.—Paddy thrashing.

Cattle are in good condition. Water sufficient. Fodder is growing very dear.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—Under large tanks, such as the Hoskote tank, etc., Vaisakhi paddy and sugar-cane are being sown, and sugar-cane is being harvested; and ragi is being threshed in parts of the district.

Standing crops are in good condition.

Crop harvested.—Sugar-cane.

Outturn of dry crops harvested is reported to vary from 4 to 8 annas.

10. Prospects of the season not bad up till now. Food stuffs sufficient in stock.

11. Except for plague prevailing in most parts of the district, public health generally good.

12. Cattle are reported to be affected with "Dod Roga" in Dodballapur, Sompur Hobli in the Nelamangala Taluk, and Malur Hobli of the Channapatna Taluk; with "Chappe Roga" in Kasaba Hobli, Kankanhalli; with "Gerasalu Roga" in the Virupakshipura Hobli; and with "Lung disease" in the Kasaba Hobli of the Channapatna Taluk. In other places, they are healthy. Water and fodder available. It is reported that scarcity of water is being felt in the Kodihalli Hobli of the Kankanhalli Taluk, and in the Virupakshipura Hobli of the Channapatna Taluk.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Standing crops are reported to be in good condition.

Crops sown.—Vaisakhi paddy in Srinivaspur, and sugar-cane in Chintamani, Chikballapur, Bagepalli and Goribidnur.

Crops harvested.—Horse gram and avare in Kolar and Srinivaspur; and sugar-cane in Kolar, Bowringpet, Chintamani, Mulbagal, Chikballapur, Bagepalli, Goribdnuri and Gudibanda.

10. Prospects of the season generally good. Food stuffs available.

11. Except for plague in a few villages of the Bowringpet, Kolar and Goribidnur Taluks and in the towns of Mulbagal and Sidlaghatta, public health generally good.

12. Cattle generally healthy. But "Rinderpest" prevails in parts of Goribidnur and Gudibanda. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are in moderately good condition.

Crops sown.—Paddy in the Gubbi Taluk.

Crops harvested.—Sugar-cane in Tumkur, Maddagiri and Gubbi; Bengal gram in Maddagiri and Koratagere; cholum in Sira and Gubbi; and cotton in Pavagada.

10. Prospects of the season moderate. Food stuffs available.

11. Except for plague in the Gubbi, Nittur and Adalgere villages in the Gubbi Taluk, and fever in Tiptur, public health good.

12. Except in parts of the Maddagiri, Chiknayakanhalli and Pavagada Taluks, cattle healthy in all the other parts. Water and fodder available for the present.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Gundlupet, T.-Narsipur and Mandya Taluks are being ploughed. Paddy, horse gram and ragi are being threshed in parts of the Malvalli Taluk.

Standing crops are reported to be in good condition in all the taluks except in parts of the Beligiri hobli, Nanjangud Taluk, where cotton crop is reported to have been affected with "Murthi Roga."

Crops sown.—Black gram, green gram and manurial crops are being sown in parts of the T.-Narsipur Taluk.

Crops harvested.—Paddy and ragi in parts of the Nagamangala Taluk; and Bengal gram in parts of the Nagamangala and T.-Narsipur Taluks; these are being harvested.

Probable outturn of crops :—

Malvalli Taluk—Paddy, horse gram and ragi ... ... Yield 8 annas each.

10. Prospects of the season good. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Mysore, Hunsur, Gundlupet, Nanjangud and T.-Narsipur Taluks, public health generally good.

12. Cattle are reported to be healthy in all the taluks, except in some villages of the Yelwal and Talkad hoblis of the Mysore and T.-Narsipur Taluks, respectively, where they are reported to be suffering from "Foot and Mouth" disease. "Dod Roga" is reported to be prevalent among them in the Kasba hobli of the Mysore Taluk. "Foot and Mouth" disease in some of the villages of the Bannur hobli, T.-Narsipur Taluk, is reported to be abating. Water and fodder available throughout.

HASSAN.

8. Market well supplied.

9. *Standing crops, viz.*, sugar-cane, onions, garlic, etc., are reported to be in good condition.

Crops sown.—Sugar-cane is being sown in the Channarayapatna Taluk.

Crops harvested.—Bengal gram and sugar-cane are being harvested in the Channarayapatna Taluk.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks, public health generally good.

12. Cattle generally healthy. The disease among cattle in parts of the Hassan and Belur Taluks is reported to be declining and that in parts of Arsikere it is still continuing and that the sick cattle are being treated as per instructions of the Inspector of Cattle Diseases. It is reported that cattle in Gundasi in the Arsikere Taluk are suffering from purging and swelling of the abdomen and that the Inspector of Cattle Diseases has been informed of these. Water and fodder available.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Lands are being ploughed in portions of the Shimoga and Nagar Taluks.

Crop sown.—Sugar-cane is being planted in portions of the Shimoga and Shikarpur Taluks.

Crops harvested.—Sugar-cane is being milled in all the taluks except Honnali, and that Bengal gram is being harvested in portions of the Channagiri and Honnali Taluks.

Probable outturn of crops :—

Channagiri Taluk—		
Paddy	...	Yield from 8 to 12 annas.
Ragi	...	„ „ „
Cholum	...	„ „ „
Bengal gram	...	„ 2 to 6 „
Shikarpur Taluk—		
Paddy	...	... Yield 12 annas.
Sugar-cane	...	... „ 10 „
Sagar Taluk—		
Paddy	...	... Yield 14 annas.
Arecanut	...	... „ 15 „
Nagar Taluk—		
Paddy	...	... Yield 12 annas.
Sugar-cane	...	... „ 12 „
Kumsi Sub-Taluk—		
Sugar-cane	...	... Yield 4 annas.

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Except for plague which is subsiding in the Channagiri, Shikarpur and Tirthahalli Taluks, public health generally good.

12. Cattle generally healthy, except in a few villages in the Nagar and Tirthahalli Taluks, where murrain prevails. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of kodè paddy in parts of Mudgere and manuring of bagayat lands in the Koppa Taluk are going on.

Standing crops:—

In Chikmagalur—Sugar-cane, coffee, Bengal gram, fenugreek, gingelly, wheat, kar paddy and horse gram.
In Kadur—Sugar-cane, Bengal gram, cholum and wheat.
In Tarikere—Bengal gram and sugar-cane.
In Koppa—Pepper, sugar-cane and areca.
In Mudgere—Nil.
In Yedahalli—Areca, coffee and sugar-cane.
In Sringeri—Not reported.

All the above are reported to be in good condition.

Crops harvested and their yield:—

Chikmagalur—Coffee, sugar-cane, Bengal gram, horse gram and fenugreek.			
Kadur—Bengal gram and cholum	...	Yield	8 annas.
wheat	...	,,	6 ,,
Tarikere—Bengal gram	...	,,	8 ,,
Sugar-cane on a small scale.			
Koppa—Areca	...	,,	16 ,,
Sugar-cane on a small scale.			
Mudgere—Nil.			
Yedahalli—Coffee, areca and sugar-cane ...	...	,,	12 ,,
Sringeri—Not reported.			

N. B.—Report from Sringeri not received.

10. Prospects of the season good. Food stuffs sufficient. Paddy is being largely exported from Chikmagalur to Bangalore and other parts.

11. Except for plague in certain places in the Tarikere, Mudgere and Kadur Taluks public health generally good.

12. Cattle generally healthy. "Dodda roga" is reported to be subsiding in all the taluks except Mudgere. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops, viz.*, sugar-cane, white cholum, paddy, cotton and castor are in fair condition.

Crops sown.—Nil.

Crops harvested and their yield.—White cholum in the Chitaldrug, Hiriyur, Holalkere Taluks, and the Harihar Sub-Taluk, yield from 4 to 12 annas. Sugar-cane and cotton in Chitaldrug, Holalkere and Davangere Taluks, yield from 4 to 12 annas. Paddy in the Chitaldrug Taluk, yield from 4 to 8 annas. Castor and Bengal gram in the Davangere Taluk, yield 8 annas.

10. Prospects of the season fair. Food stuffs available.

11. Except for plague in some parts of the Davangere and Jagalur Taluks, public health generally good.

12. Cattle healthy. Water and fodder available.

BANGALORE,
4th March 1908.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

ANNUAL ADMINISTRATION REPORT OF THE AGRICULTURAL CHEMIST IN MYSORE FOR THE YEAR 1906-07.

SUGAR CANE.

19. *Object of the year's work.*—The chief object of this year's work with sugar cane was to standardise the piece of land selected for sugar cane growing. During the season of growth the very injurious effect of insufficient drainage was strikingly illustrated. The juice of the cane after being weighed and analysed was used for some experiments in sugar making. The result of these was to illustrate that with thorough skimming and liming to neutrality* a very good quality of sugar cane can be produced with comparatively simple contrivances, but that the losses incurred in doing this are very great. Improved machinery is necessary to overcome these. The results and the necessary descriptions are given below.

20. *Description of Plots.*—The wet area of the Experimental Farm at Hebbal contains a strip of land on the southern side which is on an average about one foot above the adjoining strip of land to the north of it. This strip, called Range "A," was divided into seventeen uniformly-shaped plots each having an area of one-tenth of an acre. The plots were nearly four times as long as wide and separated from each other by a raised path five links wide running the entire length of the plot. The map is given in the sixth Annual Report. On both sides of this range is a drainage channel. That on the south side was only one foot deep in places. On the southern side is also a small irrigation channel from which each plot can be watered as desired, and beyond the drainage channel but within three feet of it in places is one of the main irrigation channels of the tank. The eastern end and part of the western end of this range are also cut off by a drainage channel from the surrounding land. But in the south-western corner there is no drain.

21. *Influence of drainage on sugar cane.*—Throughout the entire range the southern ends of the plots were decidedly inferior to the remainder of the plots. As stated above, the drain on this side was not as deep as it should have been, being in places only one foot deep. Besides there were two irrigation channels near that side of the range, the one used occasionally when the cane required watering was close up to the plots. The other was separated by the drainage channel, a dam and a narrow strip of land varying in breadth from a few inches to a little over 50 feet. Wherever this strip of land was narrowest and the drain the shallowest the crop on the southern end of the plots was poorest. The cane was planted in rows running lengthwise of the plot, north and south, and at right angles to the long drainage and irrigation channels. To form some idea of the loss sustained by the crop on the southern part of the plots being stunted the centre five rows of plot No. 10 were

* The juice is limed to neutrality when, as described on page 13 of the sixth annual report, blue litmus paper is not turned red when dipped into the juice and red litmus paper is not turned blue when dipped into the juice.

divided into three equal parts; the weight of cane from the various portions was as follows:—

Section	Weight of cane cut lbs.	Equivalent to tons per acre
Southern	198	6¾
Middle	650	22½
Northern	904	31½

With the previous crop of paddy the southern part of these plots had a decidedly better crop than the northern portion. This difference in the crop of sugar cane could not therefore be due to the soil as such, being poorer on the southern end. The suggestion, which might be made, that the heavier crop of paddy had taken more out of the land and that therefore there was not as much available plant food there when the sugar cane was growing, appears improbable when we remember that in the other two ranges of the wet area which had been cropped with paddy this year as well as last year the plots which had given the best crop the first time also gave a crop much above the average the second time. A similar though not quite as striking an illustration of the injurious effect of the proximity of subsoil water on the growth of cane will be noticed by comparing the yield from plots Nos. 1 and 2 with the average of the other plots in Table No. II in the appendix. Plot No. 1 is that nearest to the tank bund. Between it and the bottom of the bund is a road 24 feet wide, a shallow drain about 1½ feet deep, for about two-thirds of its length, a narrow triangular strip of land about 10 feet wide as the base and an irrigation channel. It gave the third-highest yield of paddy in its range last year, giving 10 per cent above the average. This year it gave by far the lowest yield in the range, being 33 per cent below the average. This may in a small measure be due to the fact that the cane on this plot did not germinate well and a portion of the plot had to be replanted to ensure an even stand. But the chief reason is, I think, due to the plot being so near to the tank bund and not being drained deep enough. These indications, if confirmed, would prove that it is highly objectionable to grow paddy and sugar cane in adjoining plots unless there is a deep drain separating them.

22. The necessity of having sugar cane lands well drained is generally recognised in all cane sugar exporting countries. And those persons who have seen the effect of shallow drainage on this year's sugar cane crop on the Experimental Farm at Hebbal near Bangalore, and realize that the stunted growth there was really caused by poor drainage, ought to spare no pains to have their sugar cane lands well drained. This is, I believe, one of the principal things on the cultivation side of the sugar cane industry of Mysore to be learned by its raiyats. In Mysore sugar cane is often treated too much like paddy.

23. *Cultivation.*—The land was ploughed with a light iron plough to a depth of about six inches. Furrows were then ploughed three feet apart (running north and south, the length of the plot) about six inches deep. In these 17 lbs. of black castor cake was evenly spread and mixed with the soil at the bottom of the furrow. One row of whole cane was laid on the loosened bottom of the furrow. These were cut, where necessary, to straighten them and lightly covered with loose earth. Water had been run along the furrows and these allowed to dry sufficiently to prevent puddling of the soil before applying the black castor oil cake. Black castor was used as it was the cheapest manure available at the time, considering quality. It contained 3·99 per cent of nitrogen.* This gave 88 lbs. of nitrogen per acre or nearly 1 ton of oil cake per acre. There were 13 rows of cane in each plot. The cane was planted on the 9th and 10th of March and the first shoots appeared above ground on the 17th of that month. On the 11th of April the stand was fairly even except in plots 1 and 2 where considerable vacancies existed. All the vacancies were replanted on this day, and the first shoots of these were seen nine days later. The cane was earthed up on the 22nd to 25th of June and cultivated twice before that.

24. *Appearance of crop during growth.*—As already said, the southern portion of all the plots, those next to the irrigation channel, were decidedly inferior to that

* Nitrogen is the chief manurial constituent of oil cakes.

on the north, where a drain 2½ to 3 feet deep carried off the subsoil water. Plots No. 1 and No. 2 were also decidedly inferior in appearance throughout the year. The cane on the northern portion of plots Nos. 6 to 11 appeared to grow more luxuriantly than that on any other part of the field. But before it was full grown some of it lodged.

25. *Pests.*—A borer entering the cane through its growing point did some damage, especially in the earlier stages of the growth of the one. All stalks which were seen to be affected were cut out and burned. Later on rats and jackals did some damage where they had most cover, especially in the lodged portion.

26. *Harvesting.*—The object of this year's experiment being chiefly to see in how far the various plots would produce the same weight of sugar when the cane grown on them was treated in the same way, it was necessary to cut and crush the cane on every plot as nearly as possible at the same time; for as long as the cane was growing it would probably change in weight and composition from day to day, and the results obtained from a plot harvested at the beginning of a month would not be strictly comparable with those from a plot harvested in the middle or the end of the month; the crop on the one plot would have had two weeks or a month more in which to improve or deteriorate, as the case might be. But as we had only two small bullock mills with which to crush the cane and four ordinary local small pans in which to evaporate the juice, as the juice in each pan had to be weighed, and analysed, the cane, the tops and the begasse represented by the juice in each pan had to be weighed separately and the resultant jaggory (Gur) or massecuite (Rab) to be weighed, and analysed, it was evident that the harvesting would take a very long time. All that could be done was to take a row from each successive plot at a time and thus make the average age at which the cane was cut on each plot the same. The plot on which the first row was cut would be the last to be completely harvested. Similar arrangements had to be made to compensate for the difference there was in the mills. And with all, every precaution had to be taken to prevent samples being mixed up. It would lead too far to describe the methods adopted in detail. It is sufficient to say that this year they worked very satisfactorily indeed, because the cane changed but little in composition during the two months it was being harvested. Whether it changed in weight it is impossible to tell, but probably what change there was, was slight. But as the cane does not necessarily remain constant in composition and weight nor change uniformly during the harvest season, it is impossible to be sure of being able to satisfactorily compensate for the inaccuracies produced by a protracted harvest season. I confidently hope therefore before long to have the appliances to harvest the entire range of cane plots in a week or two. With appliances permitting the cane of a whole plot being milled at a time and all the juice being evaporated in one vessel, the analytical and other work connected with the harvesting would be reduced to one-tenth of what it now is and the results obtained would be more valuable.

27. *Composition of cane.*—The per cent of juice extracted from the cane was on an average 64·31, and the percentage of begasse,* 32·31. This leaves a wastage of nearly 3·6 per cent caused principally by the loss of juice during milling and evaporation of moisture from the begasse after milling.

28. The solid part of the cane, "the framework" and cell walls which is called mark, was larger this year than in previous years. It constituted 10·41 % on an average of the weight of the cane. It varied from 8·3 % on a part of plot No. 7 to 12 % on a part of plot No. 14. We were unable to find any relation between the percentage of mark and the size of cane or the composition of its juice. But on account of press of work the mark was only determined in a little over 20 % of the samples of cane. The lowest percentage of mark, *viz.*, 8·3 %, was found in the cane which had lodged most and that was where in the early stages the cane had grown most luxuriantly. The lodging was undoubtedly largely due to the small percentage of mark, but that this small percentage of mark was due to the vigorous growth of the cane in its early stages is not necessarily the case, for in previous years we have found a lower percentage of mark than this in cane which did not grow luxuriantly at any time of its growth.

* The refuse cane after it has been crushed.

29. The composition of the juice was fairly uniform notwithstanding that the harvesting season extended over two months. Excluding the badly lodged cane the cane sugar* content varied from 19·25 % to 21·75 % and the glucose* or grape sugar from 1·22 % to 0·18 %. In all cases where the glucose exceeded half a per cent some fermentation had probably taken place. There were several small patches on which the cane had lodged more or less. This cane as well as a large portion of that injured by rats or jackals was harvested together with the sound standing cane, and most of this injured or lodged cane had had a high percentage of glucose, probably due to fermentation. This in itself would account in a large measure for the high percentage of glucose sometimes found in the juice; besides the juice from the injured cane would probably start at once fermentation of the whole lot of juice of which it formed a part. By referring to Table No. II in the appendix it will be seen that the average composition of the juice from the entire field was 20·59 % of sucrose and 0·47 % of glucose. This indicates that the cane is of exceptionally good quality.

30. *Lodged cane.*—The badly lodged portion of cane was harvested separately. It contained 16·1 % of cane sugar and 2·16 % of glucose. Besides this great reduction in quality there was a very material reduction in the total weight of the cane harvested. This lodged portion of cane was at the northern end of the plot where all the plots produced a much better crop than on the southern end. The amount of cane harvested from this patch was equivalent to 4,486 lbs. per plot. The total yield of the plot was 5,262 lbs. But making allowance for the difference on crop on the northern and southern portions of all the other plots the loss due to the cane having lodged is at least one-third, if not half, of the total weight of cane. And the total weight of sugar produced is far short of being one-half of that which would most likely have been produced if the cane had not lodged.

31. *Comparison of plots.*—As already stated, the cane on plots No. 1 and No. 2 was decidedly poorer in appearance throughout the year than that on the other plots. Plot No. 1 produced nearly 25 per cent less sugar than the average of the entire range, and plot No. 2 gave over 22 per cent less than the average. If these continue to yield such poor crops in future they will have to be excluded from the experimental sugar cane area. As already mentioned when speaking about drainage, the paddy produced by these plots in the previous year was up to the average. In fact plot No. 1 was 10 per cent above the average and stood third in yield. With the exception of these two all the plots gave fairly uniform crops. This indicates that the range is probably well suited for experiments with sugar cane. Barring plots No. 7 and No. 2, the variations from the average yield find their extremes in plot No. 7, which is about 7 per cent below the average, and plot No. 13, which is about 13 per cent above the average. Strange to say plot No. 13 which gave the highest yield of sugar cane this year, gave all but the lowest yield of paddy last year. If these results are confirmed they will furnish another illustration that paddy cannot be used as a crop for standardizing plots intended to be used for experiments with sugar canes. Plot No. 14, which gave by far the poorest yield of paddy last year (giving more than 25 per cent below the average) gave slightly above the average weight of cane sugar this year.

32. While in reality the plots, when taken as a whole, gave surprisingly uniform returns, they seemed, when judged by their appearance from the outside, to vary very much indeed. This impression was not much improved when pushing one's way through the standing cane. When only a few rows were left standing on the centre of each plot and a good view could be had of them from all sides they appeared to be fairly uniform. But even then they did not appear to be nearly as uniform as they were in reality. I wish to draw special attention to this because some experimentors in India have suggested that a sugar cane crop might be judged sufficiently well by the eye. If a reliable assistant cannot be found to weigh the crop the experimentor should, in my opinion, weigh the crop himself, and if a reliable

* The juice of sugar cane contains sucrose and glucose in addition to water, colouring matters, albuminoid substances, ash, acids and a number of other substances not referred to here. Sucrose or cane sugar is absolutely pure ordinary sugar. Thoroughly dry white refined sugar is nearly pure sucrose. Glucose is a name given to a group of other sugars which is not as sweet to the taste, does not crystalize as easily and is simpler in composition than sucrose. It constitutes one of the impurities of sugar, makes the jaggory soft and liable to run in the monsoon and tends to prevent the ordinary sugar from crystalizing or becoming solid.

weighing machine cannot be secured it would, in my opinion, be useless to carry on any experiment with cane in which the yield of cane per acre forms any part.

33. *The effect of stunted growth on the composition of Cane.*—As already mentioned in para 21 on page 3, when speaking about the effect of imperfect drainage on the growth of cane, one strip of five rows on plot No. 10 was divided into three equal parts. Each was harvested separately. The southern portion produced less than one-fourth of the crop grown on the northern third. The object of reaping these parts separately was chiefly to see what effect the stunted growth had on the composition of the cane. A popular belief is that stunted cane is relatively much the richer. By comparing the composition of the juice from this cane it will be seen that such is certainly not always the case. All the cane was cut and analysed the same day. The following is the result:—

EFFECT OF GROWTH OF CANE ON ITS COMPOSITION.

Description of sample	Weight of cane harvested	Yield per acre	Mark	Juice	
				Sucrose	Glucose
Plot No. 10 rows 5 to 9—	lbs.	Tons	Per cent	Per cent	Per cent
Southern one-third	198	6·89	11·43	21·05	·19
Middle one-third	650	22·63	10·45	21·65	·38
Northern one-third	904	31·47	11·92	20·10	·68

The middle third of these rows is about an average crop. It has a higher cane sugar content and a lower percentage of mark than either the other two. That in this case the cane which had grown the most vigorously contains the highest per cent of mark is worth noting and is encouraging. It certainly does not support the view that vigorous growth always implies a low mark content. A higher percentage of mark than is required to keep the cane from lodging is of course objectionable. But to have one or two per cent mark more than is actually required is very much better than to have so little mark that the cane lodges. The more vigorous the growth of the cane the more danger there is of the cane lodging on account of the greater weight which has to be supported. If the conditions which favoured a heavy growth of cane also favoured a low or inferior mark formation it would be very discouraging indeed. But the figures obtained this year indicate that such is certainly not always the case.

34. No conclusions can be drawn from the difference in the glucose content. There appears to be an increase in the glucose the heavier the crop. But this is probably due to a larger number of canes having been injured by rats or jackals in the places where the cane stood thickest. Any serious injury to the cane implies of course a reduction of sucrose and increase of glucose. However, the figures do indicate that stunted growth does not necessarily imply a higher sugar content and a higher percentage of mark than would otherwise be the case.

35. *Ripening of Cane.*—By referring to Table No. 1 on page 11 of the sixth Annual Report it will be seen that the cane in those experiments was at its best for less than a week, the cane sugar content being nearly 2 per cent lower a month before it reached the maximum and considerably more than 2 per cent below the maximum within a month after it had reached that stage. These were experiments made on samples of six canes each. This year the harvesting season lasted over two months. Below is given a table giving the average composition of all the canes cut in each successive week of the season.

The average composition of the cane cut at different times during the harvest season:—

Week of harvest season.	Sucrose.	Glucose.	Total solid.
1st week	...20·25	·41	21·02
2nd ,,	...20·76	·33	21·37
3rd ,,	...20·89	·44	21·71
4th ,,	...20·60	·46	21·51
5th ,,	... ...	...	...
6th ,,	... ...	...	...
7th ,,	...20·96	·50	21·88
8th ,,	...20·73	·68	21·82
9th ,,	...20·49	·67	21·50

* During the 5th and 6th week, after beginning the cutting of cane other pressing work had to be done, and no cane was cut.

36. By comparing the above figures it will be noticed that the cane crop was wonderfully uniform in composition during the entire harvest season. During the first week the cane does not appear to have been quite mature and as the season advanced there was a slight increase in the glucose content. The difference between these results and those recorded in the sixth Annual Report is no doubt due to the fact that in the results of two years ago average canes were selected each time. Those results indicate therefore what takes place in the individual canes. This year's results show what takes place in a field where the stalks are not all of the same age. Some are still improving in composition while others are already deteriorating. The average of a field therefore remains nearly constant for a much longer period of time than the individual canes.

37. *Influence of variety on deteriorations of Cane after reaching maturity.*—Varieties differ very materially in the rate with which they deteriorate after maturity. In one of the varieties grown on the Farm the individual canes varied only three-quarters of a percent in their sucrose content during four months' time. During all that time the juice showed a cane sugar content of 21% or more. Another variety remained comparatively constant in quality for six weeks. During that time the individual canes varied about 1% in sucrose (cane sugar) content, *viz.*, from 19·8% to 21%. Two other varieties deteriorated again as rapidly as the variety experimented with two years ago. Naturally it is desirable to cultivate such varieties, other things being equal, which remain at their best for the longest time.

SUGAR.

38. In para 42, page 21 of my sixth Annual Report, are given some of the reasons why it is necessary that India should produce sugar instead of jaggory or gur or gull if cane growing is to receive the attention it deserves. As stated there the quantity of sugar imported into India in 1903-04 was a little over 106,000 tons. Since then it has been rapidly rising and was last year (1905-06) over 413,000 tons, an increase of nearly 300% in 12 years. In the past two years there has been an increase of 97,000 tons in the imports or an increase of over 30% on the 316,000 tons imported two years ago. And most of this (over 90%) is refined sugar. Last year's imports show an increase in one year of over 19%.

39. To form some idea of the constant increase in the importation of sugar which is going on, I quote the following quinquennial averages of imports in tons and their values for the past 20 years:—

Years	Average import of total sugar Tons	Increase over previous period	Average value per year in lakhs of rupees.	Increase over previous period
	Tons	%		%
1886-91 ...	98,307	...	231	...
1891-96 ...	115,223	17	279	21
1896-01 ...	201,951	75	419	50
1901-06 ...	330,175	63	629	50

Last year's imports amount to nearly 2½ lbs. of sugar for every person living in India, or a little over 3¼ annas per head. When these quantities per individual are compared with the totals of 926,365,440 lbs. and Rs. 7,77,45,199, they appear very insignificant and show that while the total imports are enormous there is every prospect of the present steady advance in the imports continuing unless something very energetic is done to check them. These constantly increasing imports of refined sugar indicate that there is a strong and growing demand for refined sugar which is not being supplied by the present sugar industry in India. As there are enormous losses in the practice of boiling the sugar cane juice first into jaggory and afterwards refining this, as pointed out in several of my previous reports, it is not surprising that that method which has been practised in India for a considerable period of time is unable to check to any appreciable extent the imports of sugar into India. The only course open is to produce centrifugal sugar directly from the sugar cane juice and not boil it into jaggory first. This course has been

advocated by me ever since arriving in India, and every year's work has placed me in a position to urge that course more strongly than in the previous year.

40. *"Hadi's process."*—The Department of Agriculture of the United Provinces have also studied that problem for some time, and one of their Assistant Directors, Mr. S. M. Hadi, has advocated a system of clarification in which no lime is used, the separation of the scum is assisted by the addition of the mucilaginous extract of the wild "Bhendi" (a hibiscus) and a little bicarbonate of soda and the clarified juice is evaporated by a continuous process in a pan somewhat similar to that used by maple sugar makers in America and sold by manufacturers under the name of "American evaporators." The "Hadi system" is described in detail in Bulletin No. 19 of the Department of Agriculture for the United Provinces. The plant has been exhibited at the Calcutta Exhibition and has attracted a great deal of very favorable attention. It was also exhibited to the members of the Board of Agriculture at Cawnpore and the quality of sugar it turned out has been much admired by all expressing an opinion on the same. To me it appeared, however, that the process must lead to a great loss of cane sugar by inversion into glucose. Mr. Hadi quite realized the advantage of using lime if that could be done without injuring the colour of the sugar produced, but his experience was that the use of lime invariably affected the colour very injuriously.

41. As the sugar turned out by Mr. Hadi was of exceptionally good quality, and as the loss of sugar due to inversion had never been determined when using this particular process, I determined to try it and check it carefully at the Experimental Farm this year. Instead of the continuous open evaporator used by Mr. Hadi I used the ordinary open pan used by the Mysore raiyat, and instead of the extract of the wild Bhendi I used that of the cultivated variety, *Hibiscus esculentus*, which gives a mucilaginous extract very similar if not identical with that of the wild variety used by Mr. Hadi. However, Mr. Hadi also uses the cultivated variety. In every other detail the process was carried out as in Cawnpore.

42. *Loss by inversion in the "Hadi process."*—As will be seen from Table No. IV in the appendix, there was, on an average, an inversion of over 22 per cent of the sugar into glucose when using the "Hadi process;" while when using the ordinary process, that of fully liming the juice, the loss of cane sugar from inversion was only 6·59 per cent, as given in Table No. V in the appendix. In other words, the use of the "Hadi process" implied that 1,095 lbs. of cane sugar per acre were totally lost when compared with the ordinary process, and that about an equal quantity became irrecoverable from the molasses; in all therefore 2,190 lbs., or nearly one-third of the total sugar in the juice were lost when using this method when the molasses was used for making "second sugars." This at Rs. 2-8-0 per maund of 28 lbs., the price we obtained for the sugar produced this year, amounts to Rs. 195. Mr. Hadi makes no second sugars and boils the molasses from the first sugar into jaggory. If he can sell that at a good figure his loss would be materially reduced. But from a sugar-making standpoint it would still remain unaltered, or rather become worse on that account, because further inversion would take place when boiling the molasses to jaggory. Unfortunately the juice used for these experiments contained a larger percentage of glucose than that used for making the sugar in the ordinary way. Of course that has been taken account of when calculating the loss of sugar by inversion. But it has frequently been noticed that some juices containing a high percentage of glucose to begin with lose more sugar by inversion when boiled down to jaggory (notwithstanding that they are limed in the same way) than other samples of juice containing less glucose to begin with. Why this should be the case has not yet been determined. That it is a fact may be observed by comparing the average loss by inversion given in Table No. III with that in Table No. V. In both the juice was fully limed. But the average percentage of glucose of the juice in Table No. III is considerably lower than that of the juice used, for the results given in Table No. V and the loss from inversion in Table No. III is only about two-thirds of that in Table No. V, being 4·5 per cent in the one and 6·5 per cent in the other. But even making a most liberal allowance for this unfortunate circumstance, the net results will not be materially affected.

43. *Colour of sugars from the "Hadi process" and that made in the ordinary way.* The great advantage claimed for the "Hadi process" is that it will produce a sugar of much lighter colour and much finer and softer grain than when the juice is limed. To test this point the colour of the samples of sugar made by the "Hadi process"

311

were compared with those made in the ordinary way, except that they were washed in the centrifugal with the soapnut decoction used in the Hadi process. The result was that the sugar made in the ordinary way was on the average 6 per cent lighter in colour than that made by the "Hadi process." These tests were made with both the Lovibond tintometer and the Nesler tubes. When both samples were washed with water instead of soapnut decoction there was on the average no difference in colour. Both samples were 30 per cent darker than the average of the sugars boiled from fully limed juice washed in the centrifugal with soapnut decoction. The unwashed sugars were also alike in color, both being 137 per cent darker than the ordinary sugar washed with soapnut decoction. The sugar produced by the Hadi process had therefore no superiority in colour over that boiled in the ordinary way.

44. *Fineness of grain in sugars.*—The fineness of grain depends principally on the rapidity with which the massecuite or rab is cooled down after boiling and the concentration of the massecuite or rab. The more rapidly it is cooled and the more concentrated the massecuite or rab is the finer the grain. Another factor which affects the size of the grain of sugar is the impurities in the massecuite. The more impurities in the massecuite the less of the sugar will separate out and the finer the grain. The last of these factors is the only one which differs in the two processes, and as the massecuite made by the "Hadi process" is the more impure on account of the large amount of glucose it contains, that process has a tendency to produce a smaller grained sugar. But by stirring the massecuite made in the ordinary way a little longer than is done in the "Hadi process" an equally small grained sugar can be obtained if that is desired. But from a sugar manufacturer's standpoint it is highly desirable to have a large grain or crystal of uniform size. It gives a better outturn of sugar and centrifugals more easily. Besides a large grained sugar generally contains less glucose, in other words, it is purer. If the market demands a small grained sugar it can, I believe, be produced more cheaply by grinding a larger grained sugar than by producing a very fine grained sugar to begin with.

45. *Losses other than by inversion.*—Provided there is no filter press, chief of these losses is the sugar removed in skimming. But no reliable figures are available under that head this year. The chief object this year was to skim as thoroughly as possible and as time was very pressing the filtration of the skimmings was not carried out with that care it should have been done to get results worth publishing.

46. *Filtration of scums.*—We have not as yet found a simple method of filtering the skimmings which is sufficiently rapid and effective, when the juice is skimmed as thoroughly as was done this year, to recommend it. There has been, as far we could see this year, no difference in the amounts and consistency of the skimmings in the two processes.

47. *Sugar lost in molasses.*—There was, however as already mentioned, a difference in the amount of cane sugar lost in the molasses. Although the massecuite (rab) was boiled a little "harder" in the "Hadi process," as is indicated by the glucose ratio of the molasses, there was a considerably larger proportion of undecomposed sugar left in the molasses by this process than by the ordinary process. In the "Hadi process" there were 37·12% of the total cane sugar left in the molasses after the first boiling and in the ordinary process 34%. The glucose ratio of the molasses from the massecuite prepared by the "Hadi process" was 1 to 1·24, that is for every pound of glucose in the molasses there were 1·24 lbs. sucrose cane sugar present. In the ordinary process the ratio was 1 to 3·55. These figures imply that a very much larger amount of second sugars can be obtained out of the molasses obtained by the ordinary process than that by the "Hadi process." The molasses has not yet been reboiled, but the past experience indicates that if a definite quantity of Hadi process molasses would give ·2 lbs. of sugar the same quantity of ordinary molasses would give about 30 lbs. second sugar.

48. *Conclusions.*—On every point on which we have examined the two processes the ordinary process has either been equal to or superior to the "Hadi process," and in most cases decidedly superior. The skimming with the "Hadi process" was on the whole a little easier, but we have been unable to make that a comparative test. All the work was carried out under my direction by Mr. Ramachandra Rao, the Farm Manager. He had no previous experience with either process, and both processes had therefore an equally good chance in his hands. That he did his work

well may be judged from the fact that the sample of sugar turned out by the "Hadi process" was as good as that turned out by Mr. Hadi himself, and that the sugar by the ordinary process was much superior to any which has been boiled here in previous years.

49. The secret of making a light-coloured sugar is very careful skimming and skimming at the right time.

50. *The advantage of the use of bicarbonate of Soda, in the "Hadi process."*—At first sight it may be difficult to understand what possible good there can be in adding a little of a solution of bicarbonate of soda to the acid juice a short time before the latter comes to the boil. It must increase the soluble ash in the massecuite and thus would keep some of the sugar in the molasses which would otherwise crystallise out. The quantity added is too small to appreciably affect the acidity of the juice. It is enough, however, to produce a large number of small bubbles of carbonic acid gas, and some of these get caught in the small particles of "scum" which have already formed but have not yet risen to the surface. Or rather, these bubbles are most easily formed where these solid particles exist. And in rising to the surface they carry the little solid particles with them. The bicarbonate of soda therefore assists in the rapid formation of a good "blanket," as the scum is technically called when it is packed together on the surface of the juice. Possibly the mucilaginous extract from the Bhindi may make this blanket a little tougher than it would otherwise be. But if it does so we have failed to notice that fact.

51. The price realized for the sugar produced this year which was offered for sale was Rs. 2-8-0 per maund of 28 lbs. or only one anna less than refined sugar could be bought for at the same time in the same market. The best quality of jaggory was sold for Rs. 1-8-0 per maund. The juice from which it was made was skimmed to the same extent and in the same way as that from which the ordinary samples of sugar were made.

Plant Food removed by Sugar Cane.

52. In para 50, page 25 of last year's report, octavo form, it was promised that the juice, leaves, top and trash of sugar cane should be analysed this year to determine the amount of plant food actually removed by sugar cane from the soil. This has been done, and the results are given in Tables No. VIII, No. IX and No. X in the Appendix. The results are calculated on the crop actually grown on the spot where the samples for analyses were taken. That was at the rate of 24·95 tons per acre. From the tables referred to it will be seen, that the total amount of plant food removed in the portion of cane above ground (unfortunately the roots could not be analysed this year) is 55½ lbs. of both nitrogen and lime, 68½ lbs. of phosphoric acid and 190 lbs. of potash.

53. These figures therefore show that the sugar cane removed three times as much potash as it did of any of those other constituents of the soil generally supplied to it in fertilizers. The tops and the green leaves together contain more than half of this amount, the green leaves which are usually fed to the bullocks containing most of this.

54. Of the total nitrogen removed fully one-third is in the begasse. But as the begasse decomposes very slowly even if ground up to a fine powder little of this will be available for future crops even if applied to the soil. Undoubtedly it is much more valuable as fuel than as a manure.

55. It may appear strange to some that the dead leaves or trash contained more than one-third of all the lime removed, notwithstanding that they constituted less than 6½% of the total weight of substance removed from the field. The proportion of potash in the dead leaves is not nearly so great, being only a little over 11%. Comparing with this the relative amount of potash and lime in the green leaves we find that they contain for the same amount of lime more than 2½ times the amount of potash. This indicates in conjunction with the figures contained in Table No. VIII that the lime accumulates in the leaves as they are growing and remains there. That on the other hand the potash in the dying leaves is removed and used again in other parts of the cane. This is quite in conformity with the facts observed elsewhere. But notwithstanding the fact that the potash did not remain to any very large extent in the dead leaves, while the lime did, the cane as a whole contained four times as much potash as lime.

56. These facts certainly indicate that the crop of sugar cane drew heavily on the potash in the soil, and may possibly account why it is found advantageous to give such heavy dressings of oil cake in some places in India if no other fertilizer supplying potash is used. The soil has no doubt a great deal to do with this and probably the variety of cane also. It is possible, however, that where these large applications of oil cake are given sufficient attention is not paid to the potash or phosphoric acid requirements of the cane. Should this be the case it may perhaps be possible to reduce the cost of manures for sugar cane very materially without reducing the returns. I need not say that manurial experiments with cane will be begun as soon as possible and that the testing of this point will form the basis of these experiments.

57. *Tables.*—In the appendix are given a number of tables which practically speak for themselves. Table No. 1 contains the weights of sugar cane, tops, begasse and jaggory or massecuite, actually obtained from the plots. The composition of the juice and jaggory are also given. A small portion of the cane from each plot which was not milled with the bulk of the cane is not included in these figures. Table No. II gives the total yields each plot would probably have given if this cane used in other ways had also been milled at the regular harvest time. For this calculation it is taken for granted that the cane used for these other purposes had the same composition as that which is given in Table No. I. Table No. III gives the loss of cane sugar due to inversion while boiling down the juice for all the samples of juice limed to neutrality. Table No. V gives the decomposition of sucrose into glucose during the latter part of the season when the glucose content of the juice was relatively higher than in the early part of the season. It has been noticed before that juice which contains a lot of glucose to begin with frequently loses more sugar by inversion during boiling than juice which has little glucose, notwithstanding that both are limed in the same way. Table No. IV shows the results obtained when boiling sugar by the "Hadi system," and Table No. V gives the results obtained when boiling sugar from similar juice in the ordinary way. Table No. VI groups together all the samples of juice milled during the same week of the harvest season, giving the composition of the juice and the date on which it was milled. And Table No. VII gives the results of the analyses of the juice from two of the varieties of cane grown on the Farm when cut at different periods. Six average canes were selected from time to time from each plot. These were cut and the juice analysed to find out when the cane was ripe and how long it would remain at this its best stage.

PADDY.

58. In Table No. 1, page 6 of last year's report, are given the yields of grain obtained from the wet area in the first two crops of paddy. It was intended to plant this year the same variety of paddy as that used in 1906. But the Farm Manager had not sown enough seed in the nursery to plant the entire area in the usual way. To save time a "sixty days" paddy which had been imported the previous year from Madras was used instead. This grew fairly well until after it had shot into ears, though not as vigorously as the "Chintamani Sannabhatta" had done the previous year.

59. When the harvest time approached it was found that practically none of the ear heads had filled. A little later fresh shoots were sent up, and in the hope that these might possibly produce grains the experiment was tried of letting the paddy remain on the field until these new shoots were mature. But this experiment was a failure as no grain formed in the second crop of ear heads.

60. The transplanting of the paddy from the nursery to the experimental plots began on October 8th, and was finished on the 15th of October. The paddy was cut on the 7th and 8th of February. No manure was used for this crop and none had been used for the two previous crop of paddy.

61. Before it was found out that the paddy on the Farm had formed no grain, several samples of paddy which had not formed grain were sent by raiyats from various localities in the State with the request to identify the disease and give a remedy for the same. But Dr. Butler, the Imperial Mycologist, was unable to find any trace of disease on the samples sent him. These included a sample from the Experimental Farm.

62. Before sending these samples to Dr. Butler I examined them as carefully as I could. But the only abnormal thing I could find was that the cells of the straw were full of starch. Apparently the starch which is usually stored in the grain had been formed, but there being no grain in which it could be deposited it remained in the straw. This was therefore of a higher feeding value than it would otherwise have been. That is, however, a poor compensation for the loss of grain.

63. Several suggestions have been made as to the possible causes for the non-formation of the grain. One of these was that the variety had been newly imported. But as the seed from which this crop had been produced had grown on another part of the same farm the previous year, and the crop of which this seed formed a part had been a good one, this could hardly be the cause. Another suggestion was that the climatic conditions at the time when the paddy was flowering were possibly very abnormal. Nothing very abnormal was noted about the season, and the fact that the second crop of ear heads (which flowered several weeks after the first crop had flowered) also failed to produce grain, speaks against this theory. A third suggestion was that the land might have been in bad manurial condition, having had no manure for at least three successive seasons. Some of the land was no doubt very poor. But the best plots had produced more than at the rate of 1½ tons of grain to the acre per season for the two previous seasons, and the area as a whole had shown no deterioration in its crop return the previous season. Besides, if the failure to form grain had been due to this cause, the best plots would undoubtedly have produced whatever little grain was produced. But in both ranges the best plots gave absolutely no grain, while in range B the poorest plot gave the most grain—2 lbs. 9 oz.—and in range C an average plot gave the most grain, 5 lbs. 5 oz. To none of these reasons in themselves can, I think, be assigned the failure to produce grain. If any of them have any bearing on the subject at all they can only have formed one of several causes which may have worked together to produce this very undesirable result.

64. The next crop of paddy was still growing on the experimental plots when the official year closed. It was nearing maturity and the grains had formed well.

DRY AREA.

65. *Ragi.*—All the plots which may possibly be used for experimental purposes in the dry area were uniformly treated and shown with ragi without using manure or growing any leguminous crops between the rows. The crop was cut on November 15th and 16th. But owing to the large amount ot work connected with the sugar cane harvest this year the thrashing of the ragi was not finished at the close of the official year.

66. During the time the ragi was growing there was a considerable amount of rain, and the subsoil water came to within 18 inches of the surface at a spot 4 feet 7 inches above the high water level of the tank. There was also a considerable wash of surface soil shortly after sowing before the ragi could protect the soil. These are some of the factors which have contributed to considerably reduce this year's crop. As in the previous year, there is a considerable difference in the crop produced by the various plots. But all this will have to be reported on next year.

GARDEN CROPS.

67. Nearly all the Garden crops did very poorly this year, the heavy rains were largely to blame for this. Ground nuts and Brinjals suffered badly from disease. Turmeric and ginger did fairly well. Sweet potatoes gave decidedly below an average crop. Below are the crops of sweet potatoes harvested for the past four years:—

Year	New Jersey	Nansemond	Virginia
	lbs. per acre	lbs. per acre	lbs. per acre
1903	14,170	14,870	13,050
1904	14,170	8,760	8,600
1905	22,100	20,880	21,050
1906	7,370	12,000	5,480
1906	11,400	9,300	10,200
Average ...	13,840	13,160	11,670

68. As will be noticed, the new Jersey gave the highest average yield.

69. Onions (Yadgiri) did very well; one plot yielding at the rate of 25,000 lbs. per acre and another plot at the rate of 19,000 lbs. per acre. Some of the largest onions weighed 1 lb. each.

COTTON.

70. *Carovonica cotton.*—Both the No. 1 and No. 2 varieties continued to grow, though not as well as last year. Those planted in October 1905 gave on an average of a little over 1½ oz. clean cotton per tree during the year. Those planted in April 1906 gave a little under 1½ oz.

71. A Bolivian cotton planted 5 years ago produced a little over 2 oz. per tree, but was badly attacked by scale insects.

SOIL MOISTURE.

72. *Capillarity.*—With a view of determining the depth at which the subsoil water was from the surface of the soil at various points on the farm, some of the old wells on the dry area of the farm were retained and some new ones were dug. One of these new ones was about 450 feet from the edge of the tank where the surface of the soil was 4 feet 7 inches higher than the high water level of the tank and a little over 13 feet above the bottom of the tank. This well was surrounded by a little bund to prevent the surface water running into it. Throughout the season the water in it never dropped below 6 feet 6 inches from the surface even when the tank was dry and as a rule was within 3 feet of the surface. Notwithstanding this the surface soil around the well never appeared to be excessively wet at any time. And in the beginning of the dry season the surface soil of the area around this well in which the water stood at 1 foot 7 inches from the surface at that time did not appear to have more moisture than that of other parts of the field where the surface of the subsoil water was 5 feet or 10 feet or even 25 feet below the surface of the soil. If, as it appeared to be, the soil at the surface was really as dry near this spot where the subsoil water was so near the surface, it would of course indicate that the capillarity of this soil is not nearly as great as the capillarity of soils in general is supposed to be.

73. On November 26th, a boring was made close to this well and the moisture determined in every successive 3 inches of soil. Beginning with the sample extending from the surface to 3 inches below it, the following figures give the percentage of water found in the successive layers of soil:—3·62, 6·31, 10·64, 13·65, 14·33, 14·85. The last of these samples just touched the subsoil water.

74. The soil is a laterite loam. No physical analysis was made of these particular samples, but in appearance they closely resemble a soil from the neighbourhood having the following composition:—

Approximate size of particles	Equivalent to remaining on top of a sieve having about the following No. of meshes to the linear inch	Per cent
Larger than 4 mm in diameter	5	0·00
Between 2 mm and 4 mm $\frac{1}{8}$	10	1·34
,, 1 ,, ,, 2 mm $\frac{1}{16}$	20	5·13
,, $\frac{1}{2}$,, ,, 1 mm $\frac{1}{32}$	40	6·54
,, $\frac{1}{4}$,, ,, $\frac{1}{2}$ mm $\frac{1}{64}$	60	10·34
,, $\frac{1}{8}$,, and $\frac{1}{4}$ mm $\frac{1}{128}$	90	18·90
Particles settled to the bottom of a bottle containing 8 inches of water in the following periods of time—		
$\frac{1}{4}$ minute on an average about $\frac{1}{250}$ inch in diameter		10·11
1 do do $\frac{1}{500}$ do		5·39
10 do do $\frac{1}{5000}$ do		9·30
After 10 minutes do $\frac{1}{50000}$ do		29·83

75. On December 5th, samples of soil were again taken for moisture determinations. This time a separate sample was taken every 1½ inches in three different places on the field. Series 1 was taken within 4 feet of the shallow well in which the water stood on that date 1 feet 7 inches below the surface of the soil. Series No. 3 was taken 230 feet further away from the tank, near another well in which the water stood 5 feet 6 inches from the surface of the soil, and Series No. 2 was taken at a point midway between these two:—

Depth at which the sample was taken	Per cent of water		
	Series 1	Series 2	Series 3
Surface to 1½ inches deep	1·94	1·87	1·90
From 1½ inches deep to 3 inches deep	2·07	2·84	3·77
Do 3 do to 4½ do	3·63	3·59	2·91
Do 4½ do to 6 do	4·47	3·49	4·50
Do 6 do to 7½ do	7·57	4·34	5·83
Do 7½ do to 9 do	9·42	4·81	6·59
Do 9 do to 10½ do	10·95	5·53	9·41
Do 10½ do to 1 foot deep	11·77	5·35	10·11
Do 1 foot deep to 1 foot and 1½ inches deep ...	12·55	5·67	11·35
Do 1 foot 1½ inches deep to 1 foot 3 inches deep ...	13·26	5·69	11·81
Do 1 do 3 do to 1 do 4½ do ...	13·80	6·59	12·27
Do 1 do 4½ do to 1 do 6 do ...	14·10	7·41	12·64
Do 1 do 6 do to 1 do 7½ do ...	14·99	9·27	12·38
Do 1 do 7½ do to 1 do 9 do ...	15·05	10·18	12·93
Do 1 do 9 do to 1 do 10½ do ...	...	10·72	13·14
Do 1 do 10½ do to 2 do deep	...	10·99	13·73

76. As far as these figures go there is nothing to indicate that the top 5 or 6 inches of soil at the place where the surface of the subsoil water was only one foot and seven inches from the surface contained more water than those in places where the subsoil water was much lower. There appears, however, to be something abnormal about Series No. 3. For, although these samples were taken within a few feet of a well in which the water stood at 5′ 6″ from the surface, the water content of the samples below 2′ rapidly rose until it reached 15·37 % of water at a depth of 3′ 3″. Then it remained almost constant till the level of the water in the well was reached and no further samples were taken. In Series No. 2 water was reached as four feet and, as in Series No. 1, the samples contained 12 % or a little less water to within about 6″ of the subsoil water level. Lack of time and appliances unfortunately prevented a more detailed study of this important problem on soils *in situ*.

77. Similar soils were filled into glass tubes. The lower end of these glass tubes when in a vertical position were immersed into water with the object of seeing how quickly and how far the water would rise in the soil contained in these tubes. In 24 hours it rose to 14 inches and in one case to 18 inches above the surface of the water into which these tubes were dipped. After that it rose very slowly, reaching in three weeks from 22 inches to 24 inches in height. These results confirm those obtained on soils *in situ*. Both appear to indicate that on soils like those experimented with the subsoil water has practically no effect in supplying water to the plant unless it is within two feet of the point to which roots descend.

78. *Drying out of soils.*—In order to make a preliminary study of this subject, 24 borings were made to a depth of 6 feet at various times on plots in the Laboratory compound. These plots were uniformly treated up to November 1st 1906. The surface soil had been kept loose to a depth of about 4" for about two months. On October 14th, the first boring was made and the moisture determined in every 6" of soil. On November 1st, one plot was rolled heavily so as to represent uncultivated soil. Another plot was kept stirred on the surface to a depth of about 1½ inches. A third plot was dug to a depth of about 1½ feet and on a fourth plot Bengal gram was sown.

79. Borings were made on these plots from time to time up to February 6th, 1907. The percentage of water found at various depths is given in Table No. XI in the Appendix. Nearly 400 samples of soil were taken and their water content ascertained. During the time that this work was being carried out a number of small showers of rain fell. Table No. XII, kindly sent by the Director of the Meteorological Department, gives the rainfall during this time. The rain gauge is within 300 feet of these plots.

80. The average depths to which the effect due to the evaporation of water from the surface of the soil could be distinctly noticed was as follows :—

Uncultivated plot	Cultivated 1½ inch deep	Cultivated 1½ feet deep
1 foot 9 inches	1 foot 6 inches	1 foot 6 inches

The last borings were taken nearly 1 month after the last shower of rain fell. In these the effect due to the loss of water by evaporation did not extend to more than 1' 6" in either of the cultivated plots. But in the uncultivated plot it probably extended to about 2' 6" depth, and possibly further than that.

81. The Bengal gram was only a light crop. The soil in the laboratory compound is very poor and no manures were used. Notwithstanding this the loss of moisture from the plot on which this crop grew was very much greater than from any of the other plots. Only one boring was taken on that plot and it is therefore not safe to draw deductions from it until confirmed. It appears to indicate, however, that even this light crop of Bengal gram drew on the water supply of the soil to a depth of more than 6 feet. The difference in moisture between the gram plot to a depth of 6 feet and the uncultivated plot would have been compensated for by an application of 3 inches of water over the entire plot and between it and the plot cultivated 1½ inches deep by an application of about 5½ inches of water. The total loss of water by evaporation percolation, etc., during the period from October 14th to February 6th, amounted, when considering only the two feet of soil nearest the surface on the uncultivated plot, to about two inches in excess of the rainfall, to about 1·6 inches on the plot dug 1½ feet deep and about 1·5 inches on the plot cultivated 1½ inches deep. Keeping the surface soil loose for 1½ inches acted, therefore, in this instance as well in preserving soil moisture as keeping it stirred 1½ feet deep. The extra loss of water from the upper two feet of the uncultivated soil in this experiment amounted only to the equivalent of about half an inch of rainfall during the time required for the experiment. The saving of such a small amount of moisture can, I think, hardly account fully for the great advantage constant cultivation is known to have upon the growth of crops, unless the moisture content causing the most vigorous growth in this particular soil lies much below 12%, and comparatively slight differences in the water content of the soil have a very marked influence on the growth of plants. The fact that in the pot culture experiments a mulch produced a beneficial result on the crop (*vide* para 91, page 18 of this report), notwithstanding that the water content of the soil was practically constant, also appears to indicate that keeping the surface of the soil loose has other beneficial effects than that of preserving moisture in the soil. It is, therefore, a subject requiring further investigation.

82. A glance at Table No. 11 will show that the water content of these soils does not increase uniformly with their depth. The variations are probably due to

the mechanical condition of the soil not being uniform. It will also be noticed that the soil has a tendency to retain about 12% of water up to within 2 feet of the surface.

83. The work will be continued next year.

POT-CULTURES.

84. As mentioned in para 51, page 25 of last year's report, experiments with bone meal were begun in the pot-culture house with a view of determining if possible the factors which contribute to make bone meal a comparatively readily available phosphatic fertilizer. The fact that bone decomposed very readily on one estate on which it had been applied on the surface of the soil on top of a layer of leaves, while on another estate, on which it had been buried in pits, it had not completely decomposed in 29 years, led me to the idea that either the carbonic acid of the decomposing leaves or the micro-organisms which develop in the decomposing leaves had something to do with the decomposition of the bone meal on the one estate referred to. On that estate there is a, more or less, continuous leaf fall from the coffee and the shade trees growing on it, so that the bones were soon covered by a layer of leaves which kept them moist and retained the carbonic acid generated by the decomposing leaves below.

85. To imitate this condition leaf mould, as generally used by the gardeners, was used on some of the pots and ground sugar cane refuse (begasse) on others. As the soil used for these experiments had not been tested in regard to its manurial requirements and there was no certainty that phosphatic fertilizers were required by the soil, the bone meal used for these experiments was coarse enough to permit all which had not been decomposed to be sifted out of the soil again after the experiment was over. The difference between the weight applied and the amount sifted out again would, it was supposed, indicate fairly accurately the amount decomposed. By this means it was hoped to be able to determine the rate of decomposition of the bone meal in the various pots, even if the soil did not respond to phosphatic fertilizers. For the sake of comparison some fine bone meal was also used.

86. All the usual precautions, necessary to obtain reliable results with pot-cultures, were taken. But unfortunately neither the vegetable mould, which by the way contained 75 % of sand, nor the begasse decomposed to any appreciable extent. The results do not, therefore, give the information desired, and a new set of experiments has been started on a larger scale. The experiments which have been made are, however, of value on account of other information which can be gathered from them.

87. For all the experiments made during the year 16·6 grams of bone meal were used in each pot. The coarse bone meal varied from 2 mm to 5 mm, in diameter and the fine bone meal had all passed through a sieve having 40 meshes to the linar inch. In some experiments the bone meal was mixed with the top two inches of soil. In others it was applied on the surface of the soil. In the latter experiments the bone meal was covered with either 8 ounces of leaf mould or 3 ounces of ground begasse. Some of the pots in which the bone meal was mixed with the soil were also covered with begasse.

88. The following is the average weight of the bone meal sifted out of the soil from these pots after the experiment was concluded :—

How the bone meal was applied	Bone meal sifted out by using 1 mm, sieve	Bone meal which passed through 2 mm, sieve
	gr.	gr.
Mixed with top 2 inches of soil uncovered ...	14·6	0·37
„ „ covered with begasse	14·2	0·98
Bone applied on top covered with begasse ...	15·2	0·24
Bone applied on top covered with leaf mould ...	14·3	0·67

89. As might have been expected under the circumstances, none of these figures show any rapid decomposition of the coarse bone meal. In these experiments the

bone meal mixed with the soil had decomposed a little more than that applied to the surface ; and a covering of leaf mould had a slightly better effect than that of begasse. Probably the former decomposed a little more than the latter. It was of course impossible to remove either mulch from the surface of the soil without removing a little of the soil as well. And the results of the experiments did not justify the analysis of either the leaf mould or begasse after the experiment was concluded.

90. The crop returns were as follows :—

Manures applied to pots	Dry matter	
	In straw gr.	In grain gr.
1. No manure	5·7	281
2. No manure covered with 3 oz. begasse	9·4	5·63
3. No manure covered with 8 oz. leaf mould	10·5	7·45
4. Dried blood and sulphate of potash	132·2	43·70
5. Dried blood and sulphate of potash covered with begasse ...	134·0	48·99
6. Fine bone meal, dried blood and sulphate of potash all mixed with soil (uncovered)	137·8	56·26
7. Coarse bone meal, dried blood and sulphate of potash all mixed with soil (uncovered)	125·5	49·22
8. Coarse bone meal, dried blood and sulphate of potash, bone meal on top of soil, covered with begasse	131·5	50·39
9. Coarse bone meal, dried blood and sulphate of potash, all mixed with soil, covered with begasse	139·5	52·8
10. Fine bone meal, dried blood and sulphate of potash, all mixed with soil and covered with begasse	136·0	57·5

91. These results indicate that a mulch of begasse has a slight beneficial result on the growth of ragi (the crop used for these experiments), and that a mulch of leaf mould has a somewhat greater beneficial effect than the begasse. This is the case, notwithstanding that none of the plants suffered for want of water, for the pots were watered every day and all the water lost by evaporation during the day was replaced in the evenings. This beneficial result is seen throughout the series and may be noticed by comparing the returns for the unmanured pots, No. 1, 2 and 3 ; the pots manured only with sulphate of potash and dried blood No. 4 and 5 ; those in which fine bone meal was also used, 6 and 10 ; and those in which coarse bone meal was used instead, *viz.*, No. 7 and 9. Experiments Nos. 4 and 7 and Nos. 5 and 9 show that the coarse bone meal has had some effect on the crop, though a comparatively small one. And Nos. 6 and 7 and Nos. 9 and 10 show that the fine bone meal was more effective than the coarse bone meal used. These results are particularly interesting on account of the complete harmony which exists between them. There is not a contradictory result among them. And as this is the first series of pot-culture experiments conducted here, this is particularly encouraging, notwithstanding that it has given very little information on the principal point for which these experiments were start[illegible].

92. *Preparation of soil for pot-culture work.*—In order to conduct pot-culture experiments with manures such as attempted this year it is necessary to have a soil in which the particular manures selected for experiment act to advantage. In other words the soil must be deficient in that particular ingredient of plant food with which experiments are to be carried out. Of course such soils exist naturally, but to find them sometimes necessitates a large number of analyses and a considerable number of preliminary experiments. Besides, it generally implies shipping them some distance, and sometimes shipping them from a place very far away. To overcome these difficulties, as far as possible, it is generally advisable to prepare soils artificially for

these experiments. This is done by manuring as poor a soil as can be conveniently secured in a one-sided way and cropping it for successive years as much as possible. This will gradually remove the available plant food in the direction desired. If, for example, a soil already relatively poor in phosphoric acid is heavily manured with all the other constituents of plant food and continuously cropped (if possible with a plant making heavy demands on the phosphoric acid content of the soil) the available phosphoric acid will gradually be reduced to a point where the plant will not be able to get a sufficient supply of phosphoric acid for its normal growth. When that point is reached the soil can be used to advantage for such experiments as testing the relative availability of bone meal, superphosphates, basic slag and other phosphatic fertilizers; or for conducting such experiments as the availability of bone meal under different conditions as was attempted during the year which has just closed.

93. For the purpose of exhausting soils in any desired direction six pits 8′ × 10′ were built of stone. These were refilled to within 1′ 9″ from the top and on top of this strips of Cuddappah slabs 1½″ thick and 9″ wide were set on their edge 9″ apart. The refilling was then continued to the upper edge of these strips. The remaining foot was filled in with the soil selected for the one-sided exhaustion to fit it for a particular line of pot-culture experiments. The strips of the Cuddappah slab form, in a way, a perforated bottom to the pits in question, and indicate the depth to which the soil may be removed when dug out for use in the pot culture house.

94. On these "preparation beds," as the above plots are called, the first crop is now growing.

"FAMINE FOODS."

95. In response to a Government Order, "famine foods" were collected by the Revenue and Forest Departments and sent to this laboratory for analyses.

96. A reference to this work was made in para 52, page 26 of the Fifth Annual Report.

97. Since then a large number of samples of so called "famine foods" have been received. Sometimes these samples arrived in very bad condition so that it was necessary to ask the senders to supply other samples. All of these samples have not yet been received, and some samples are likely to come in even now. The samples are therefore not yet complete; among other things the fruit of the prickly-pear, which is said to have been successfully used as a "famine food" has not yet been sent. Moreover, there has been so much work which had to be attended to at once that many of the samples already received have not yet been analysed. However, a sufficient amount of work has been done to justify the results obtained thus far being given in this report.

98. All samples received were sent to Mr. Cameron, Superintendent of Government Gardens, for identification, and all the botanical names are given on his authority.

99. From the list of samples sent in, as given in the appendix, it is evident that the term "famine food" conveys a different meaning to different people, for among the samples received was the ordinary paddy, which few would be prepared to classify under the head of "famine foods." But, as in the absence of a precise definition of the term, it is impossible to draw a sharp line of division between ordinary foods and famine foods, I have included everything sent in as a "famine food" in the tables given in the appendix.

100. Besides their food value, it would be desirable, as pointed out in the Fifth Annual Report, to determine if any of them had an injurious effect on the system if eaten for some time. But if it is remembered that this entails a long series of feeding experiment under close medical supervision, it will be apparent that this is impossible at present.

101. One of the chief points to be considered about "famine foods" is, no doubt, whether they can be got in large quantities during a famine time.

102. Of the "foods" given in Table No. XIII young bamboo shoots are the most nutricious. The air-dried sample appears to be nearly as valuable as gram or dhal, and decidedly more valuable than either rice or ragi. But unfortunately

the young shoots contain only a little over 7½ per cent dry matter. This implies that more than 10 lbs. of green shoots will have to be eaten to supply as much nourishment as is contained in one pound of gram or dhal.

103. The shoots analysed were those of the young bamboos when just above ground. The outer covering was removed and the succulent tender part inside was analysed. The weight of these varies, of course, considerably, but none of them are very large. An average shoot removed from a clump of small bamboos growing to a height of about 10 feet weighed, when prepared, a little over half an ounce.

104. Babul seeds have the highest nitrogen content of all those "famine foods" sent us in which that constituent has been determined. And this notwithstanding that more than half their weight consists of a very hard covering nearly $\frac{1}{32}$ of an inch thick. They contained over 6 per cent nitrogen. When boiling the seeds for three-quarters of an hour or more they rise to the surface of the water and the skin can then be easily cut with a knife, but it is doubtful if even then the skins are digestible. The inside of the seed has a pleasant dhal-like taste, and if any means can be devised for getting this out of its thick hard covering it will probably rise to the rank of an ordinary food, if sufficient quantities of it can be obtained and it has no injurious effect on the system. When boiled for one hour or more the skins are soft enough to be easily eaten.

105. Table No. XIII in the appendix gives the composition of 21 of the so-called "famine foods." The albumenoids have been calculated from the total nitrogen. The non-albumenoid nitrogen has not been determined. The total nitrogen of 44 other "famine foods" has been given in Table No. XIV, and Table No. XV gives such general information about the "famine foods" received up to date as is available at present.

A. LEHMANN,
Agricultural Chemist.

DISTRICT REPORTS.

8. Markets how supplied.
9. Progress of agricultural operations; state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.
10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.
11. Public health.
12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

		Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice	...	7½	6 to 6½	seers per rupee.
Ragi	...	2½	12 to 13	

Agricultural operations.—Ragi threshing.

Cattle are in good condition. Water sufficient. Fodder is growing very dear.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—Land is being tilled in parts of the Nelamangala Taluk for planting sugar-cane. Threshing of ragi is nearing completion in the district, except in the Kankanhalli and Devanhalli Taluks.

Standing crops, such as, sugar-cane and potato are reported to be in good condition.

Crop harvested.—Sugar-cane is being milled in parts of the Devanhalli, Nelamangala and Hoskote Taluks.

Outturn of dry crops harvested :—

Hoskote Taluk—Ragi	...	Yield from 8 to 12 annas.
Paddy	...	,, 6 to 12 ,,
Grain	...	,, 12 to 14 ,,
Devanhalli—Ragi	...	Yield from 4 to 6 annas.
Gram	...	,, 6 annas.
Paddy	...	,, 6 ,,

10. Prospects of the season not bad up to the present. Food stuffs sufficient in stock. But their prices continue to be high.

11. Except for plague prevailing in a few villages of the Dodballapur, Anekal, Hoskote and Devanhalli Taluks, public health generally good.

12. Cattle are reported to be affected with "Dod roga" in Dodballapur, in Sompur hobli of the Nelamangala Taluk and in Malur hobli of the Channapatna Taluk; with "Lung disease" in the Kasba hobli, Channapatna Taluk; and with "Gerasalu roga" in Virupakshipur, Channapatna Taluk. In other parts of the district, they are healthy. Water and fodder available.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Nil.

Standing crops are reported to be in good condition.

Crop sown.—Paddy in Goribidnur; and sugar-cane in all the taluks of the district, except Bowringpet.

Crops harvested.—Ragi in Srinivaspur; saffron in Goribidnur; and sugar-cane in almost all the taluks of the district.

10. Prospects of the season generally good. Food stuffs available.

11. Except for plague in a few villages of the Bowringpet and Sidlaghatta Taluks and in the towns of Mulbagal, Sidlaghatta and Chikballapur, public health generally good.

12. Cattle generally healthy. But "Rinderpest" prevails in parts of Gudibanda. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are in moderately good condition.

Crops sown.—Cholum in the Sira Taluk; and paddy and sugar-cane in the Turuvekere Sub-Taluk.

Crops harvested.—Sugar-cane in Tumkur; Bengal gram in Maddagiri, Gubbi, Tiptur, Pavagada and Turuvekere; wheat in Maddagiri; and cholum in Pavagada.

10. Prospects of the season moderate. Food stuffs available.

11. Except for plague in the Nittur and Hoskere villages in the Gubbi Taluk, and fever in Tiptur town, public health good.

12. Except in parts of the Maddagiri, Chiknayakanhalli and Pavagada Taluks, cattle healthy in other parts of the district. It is reported that scarcity of water is being felt in the Pavagada Taluk, in certain villages of the Tiptur, Honnavalli and Kibbanahalli hoblis of the Tiptur Taluk, and in the Mayasandra hobli of the Turuvekere Sub-Taluk. Fodder available for the present.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Yedatore, Gundlupet, T.-Narsipur, and Mandya Taluks are being ploughed. Ragi and horse gram are being threshed in parts of the Malvalli Taluk.

Standing crops.—

In the Mysore Taluk—Sugar-cane.
In the Chamrajnagar Taluk—Mulberry, sugar-cane and kar paddy.
In the Seringapatam Taluk—Sugar-cane.
In the Nanjangud Taluk—Cotton, mulberry and castor.
In the T.-Narsipur Taluk—Sugar-cane and mulberry.
In the Malvalli Taluk— do do
In the Mandya Taluk— do
In the Krishnarajpete Taluk— do
In the Nagamangala Taluk— do

All the above are reported to be in good condition.

Crops sown.—Black gram and green gram in parts of the Seringapatam and T.-Narsipur Taluks; kar paddy in parts of the Krishnarajpete and T.-Narsipur Taluks, are being sown.

Crops harvested.—Sugar-cane in parts of the Krishnarajpete Taluk and ragi in parts of the Nagamangala Taluk are being harvested. Sugar-cane in parts of the Malvalli and T.-Narsipur Taluks is being milled.

10. Prospects of the season good. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Mysore, Yedatore, Gundlupet, Nanjangud and T.-Narsipur Taluks, public health generally good.

12. Cattle generally healthy. But "Foot and mouth" disease in the Yelwal village and "Dodi roga" in some villages of the Kasba hobli of the Mysore Taluk are reported to be prevalent. "Foot and mouth" disease in the Thayur village, Nanjangud Taluk, is reported to be abating. Water and fodder available throughout.

HASSAN.

8. Market well supplied.

9. *Standing crops*, such as sugar-cane, onions, garlic, etc., are reported to be in good condition.

Crops sown.—Sugar-cane is being sown in the Channarayapatna Taluk.

Crop harvested.—Sugar-cane is being harvested in the Channarayapatna Taluk.

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks and cholera in Arsikere Town, public health generally good.

12. Cattle generally healthy. The disease among cattle continues in parts of the Hassan, Arsikere and Belur Taluks. It is reported that the Inspector of Cattle Diseases has gone to Javagal, Arsikere Taluk, for inspecting the sick cattle. Water and fodder available.

SHIMOGA.

8. Market well supplied.

9. *Crop planted.*—Sugar-cane in portions of the Shimoga, Shikarpur and Sorab Taluks.

Crops harvested.—Sugar-cane is being milled in all the taluks. Bengal gram is being harvested in the Shimoga, Channagiri, Honnali and Shikarpur Taluks.

10. Prospects of the season generally good. Food stuffs available in sufficient quantities.

11. Public health generally good. But plague continues in a few villages of the Shikarpur Taluk.

12. Cattle generally healthy, except in portions of the Nagar Taluk, where murrain is prevalent. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Ploughing in Mudgere and Sringeri and manuring of bagayat lands in Koppa are going on.

Standing crops:—

In Chikmagalur—Sugar-cane, Bengal gram, wheat and kar paddy.
In Kadur—Sugar-cane, Bengal gram, cholum and kar paddy.
In Tarikere—Cotton and sugar-cane.
In Koppa—Pepper and sugar-cane.
In Mudgere—Kodè paddy and sugar-cane.
In Yedahalli—Sugar-cane.
In Sringeri—Nil.

All the above are reported to be in good condition.

Crops harvested and their yield:—

Chikmagalur—Sugar-cane, Bengal gram and wheat.
Kadur—Sugar-cane and cholum ... ... Yield 8 annas.
Tarikere—Nil.
Koppa—Nil.
Mudgere—Nil.
Yedahalli—Nil.
and
Sringeri—Nil.

10. Prospects of the season good. Food stuffs sufficient.

11. Except for plague in the towns of Tarikere and Mudgere, public health generally good.

12. Cattle generally healthy. "Dod roga" is reported to be steadily going down in all taluks, except Mudgere. The four heads of cattle in the Koppa Taluk reported to be suffering from "Jardi roga" are under treatment and it is reported that there have been no fresh attacks. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops*, such as paddy, wheat, white cholum, Bengal gram, cotton, sugar-cane, castor, chillies and tobacco are reported to be in good condition.

Crops sown.—Nil.

Crops harvested and their yield.—Cotton in the Chitaldrug, Hiriyur, Holalkere and Davangere Taluks, and the Harihar Sub-Taluk, yield from 8 to 12 annas. Sugar-cane in the Chitaldrug, Holalkere and Davangere Taluks, yield 8 annas. Wheat in the Challakere Taluk, yield 4 annas. White cholum in the Challakere, Hiriyur and Holalkere Taluks, yield from 6 to 8 annas. Bengal gram in the Holalkere and Davangere Taluks and in the Harihar Sub-Taluk, yield from 8 to 12 annas. Tobacco in the Challakere Taluk, yield 6 annas.

10. Prospects of the season fair. Food stuffs available.

11. Except for plague in some villages of the Davangere Taluk, public health generally good.

12. Cattle healthy, except in some villages of the Holalkere Taluk. Water and fodder available.

BANGALORE,
18th March 1908.

in Srinivaspur and sugar-cane in all the taluks.

son generally good. Food stuffs available.

In a few villages of the Kolar and Sidlaghatta Taluks and in the atta and Chikballapur and small pox in Bairkur and Duggasandra k, public health generally good.

healthy. But "Rinderpest" prevails in parts of the Chikballapur b-Taluk. Water and fodder available.

TUMKUR.

condition.

ra; wheat in Maddagiri; sugar-cane in bi, Tiptur, Pavagada, Koratagere and

vailable.

11. Except for plague in the Yethenahalli village, Tumkur Taluk, and fever in Tiptur town; public health good.

12. Except in parts of the Maddagiri, Chiknayakanhalli and Pavagada Taluks, cattle healthy. Scarcity of water is being felt in the Pavagada Taluk, in certain villages of the Tiptur, Honnavalli and Vilevanahalli hoblis of the Tiptur Taluk, and in the Mayasandra hobli of the Turuvekere Sub-Taluk Fodder available for the present.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Gundlupet, T.-Narsipur, Yedatore and Mandya Taluks are being ploughed.

Standing crops:—

In the Mysore Taluk—Sugar-cane.
In the Chamrajnagar Taluk—Sugar-cane, mulberry and kar paddy.
In the Seringapatam Taluk—Sugar-cane.
In the Nanjangud Taluk—Mulberry and cotton.
In the T.-Narsipur Taluk—Mulberry and sugar-cane.
In the Malvalli Taluk— Do do
In the Mandya Taluk—Sugar-cane.
In the Krishnarajpete Taluk—Do

All the above are reported to be in moderately good condition. Sugar-ca of the Nagamangala Taluk is reported to be withering for want of ra

Crops sown.—Black gram and green gram in parts of the Seringapatam kar paddy in parts of the Krishnarajpete Taluk are being sown. Ka being transplanted in parts of the Krishnarajpete Taluk.

Crops harvested.—Sugar-cane in parts of the T.-Narsipur and Krishnarajpet being harvested and the same is being milled in parts of the Nagam Malvalli Taluks.

10. Prospects of the season good. Raiyats and merchants have sufficient grains.

11. Except for plague in parts of the Hunsur, Nanjangu cholera in the Halebid village of the Bilikere hobli, Hunsu good.

12. Cattle are reported to be healthy in all the taluk Kasba hobli, Mysore Taluk, where "Dod roga" is report fodder available throughout.

HASSAN.

8. Market well supplied.

9. *Standing crops, viz.*, sugar-cane, onions, garlic, etc., are reported

Crops sown.—Sugar-cane is being sown in the Channarayapatna

Crop harvested.—Sugar-cane is being harvested in the Channar

10. Prospects of the season good. Food stuffs available.

11. Except for plague in parts of the Hassan, Belur, Chann Taluks and for cholera in parts of the Arsikere Taluk, public healt

12. Cattle generally healthy. The disease among cattle cont Hassan, Belur and Manjarabad Taluks but is declining in the Ars that many cattle in Hassan, Belur and Arsikere have been inoculat

SHIMOGA.

8. Market well supplied.

9. *Crop planted.*—Sugar-cane is being planted in portions of the Sagar Taluks and the Kumsi Sub-Taluk.

Crops harvested.—Sugar-cane is being milled in the district, harvested in the Shimoga, Channagiri and Honnali Talu

Probable outturn of crops—

Channagiri Taluk cholum yield from 8 to 12 a annas.

10. Prospects of the season generally good. ties.

11. Except for plague prevailing in generally good.

12. Cattle generally healthy. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Ploughing in Mudgere, Yedahalli and Sringeri, and irrigating of bagayat lands in Koppa, are going on.

Standing crops:—

In Chikmagalur—Sugar-cane, wheat and kar paddy.
In Kadur—Sugar-cane and kar paddy.
In Tarikere—Sugar-cane and cotton.
In Koppa—Sugar cane and pepper.
In Mudgere—Sugar-cane and kodè paddy.
In Yedahalli—Sugar-cane.
In Sringeri—Nil.

All the above are reported to be in good condition.

...ops harvested and their yield:—

Chikmagalur—Wheat and sugar-cane.
Kadur—Nil.
Tarikere—Sugar-cane.
Koppa—Sugar-cane ... ... Yield 8 annas.
Mudgere—Nil.
Yedahalli—Nil.
and
Sringeri—Nil.

...rospects of the season good. Food stuffs sufficient.

...xcept for plague in the towns of Tarikere and Mudgere, and cholera in Tiptur ...pa Taluk, public health generally good.

...tle generally healthy. "Dodda Roga" is reported to be subsiding in all the ...er and fodder available.

CHITALDRUG.

... gram, wheat, cotton, paddy, sugar-cane, tobacco and ...ondition.

...*ir yield.*—Cotton in the Chitaldrug, Hiriyur and Holalkere ...m the Haribar Sub-Taluk, yield from 2 to 12 annas. Sugar- ...orse gram in the Chitaldrug Taluk, yield 8 annas. Cholum in the ... and Hiriyur Taluks, yield from 4 to 6 annas. Wheat in the Hosdurga ...d 12 annas. Bengal gram in the Holalkere Taluk, yield 8 annas.

...e season fair. Food stuffs available.

...enerally good.

...except in some villages of the Holalkere Taluk, where "Dodda ... Water and fodder available.
